## About UTeM

 <p>The logo of Universiti Teknikal Malaysia Melaka (UTeM) features a circular emblem with a stylized 'U' and 'M' and the text 'UNIVERSITI TEKNIKAL MALAYSIA MELAKA' around it. To the right, the letters 'UTeM' are prominently displayed in a bold, sans-serif font. Below the emblem, the university's name is written in Arabic script: 'اوپنورسيتي تيكنيكل ماليسيا ملاك'.</p>	<p>Universiti Teknikal Malaysia Melaka (UTeM) was established under Section 20 University and University College Act 1971 (Act 30) through “Perintah Universiti Teknikal Malaysia Melaka (Pemerbadanan 2007)” gazetted as P.U. (A) 43 on the 1st of February 2007.</p> <p>UTeM was initially known as Kolej Universiti Kebangsaan Malaysia (KUTKM), established on the 1st of December 2001.</p>
<b>VISION</b>	<p>To be one of the world’s leading <b>innovative</b> and <b>creative technical</b> universities.</p>
<b>MISSION</b>	<p>UTeM determined to lead and contribute to the wellbeing of the country and the world by:</p> <ol style="list-style-type: none"><li>1. Promoting knowledge through innovative teaching and learning, research and technical scholarship.</li><li>2. Developing professional leaders with impeccable moral values.</li><li>3. Generating sustainable development through smart partnership with the community and industry.</li></ol>
<b>MOTTO</b>	<p><b>Excellence</b> through <b>competency</b></p>

## Education Goals and Objectives

### **Educational Goals:**

- 1) To conduct academic and professional programmes based on relevant needs of the industries.
- 2) To produce graduates with relevant knowledge, technical competency, soft skills, social responsibility and accountability.
- 3) To cultivate scientific method, critical thinking, creative and innovative problem solving and autonomy in decision making amongst graduates.
- 4) To foster research development and innovation activities with industries for the prosperity of the Nation.
- 5) To equip graduates with leadership and teamwork skills as well as develop communication and life-long learning skills.
- 6) To develop technopreneurship and managerial skills amongst graduates.
- 7) To instill an appreciation of the arts and cultural values and awareness of healthy life styles amongst graduates.

### **Objectives:**

- 1) To become a creative and innovative learning and knowledge organization that practice and application oriented academic programme in the fields of engineering and technology.
- 2) To lead in research, development, innovation, commercialization and consultancy activities based on the needs of the industry.
- 3) To produce competent graduates with moral who will be the preferred choice by the industry.
- 4) To have competent and highly qualified staff with vast practical experiences.
- 5) To play an effective role as the main impetus to the industrial development of the nation.
- 6) To establish cooperation and smart partnership between the university and the industries.
- 7) To provide infrastructure and conducive environment to generate and maintain excellence.
- 8) To implement comprehensive and extensive usage of ICT in both academic activities and management of the university.

## Dean's Message

Assalamualaikum W.R.T. and Greetings,

On behalf of the faculty members, I would like to welcome you to the first technical university in Malaysia, Universiti Teknikal Malaysia Melaka (UTeM), specifically the Faculty of Information and Communication Technology (FTMK). We are honoured to have you choose us for your tertiary education. We look forward to fostering your success.

Since its inception in the early 2000s, FTMK has offered application-oriented programs, from the Diploma level to PhD. We have successfully graduated numerous competent alums who are now players in various sectors of industry, business, public service, and community.

It is our commitment to ensure that our curricula meet current and future demands through practical-oriented courses, professional certifications, and industry feedback. Hence, undergraduate students will be attached to academic advisors to guide and nurture your success. Also, industry players will partly evaluate students' projects as exposure to their standards and requirements.

Information on your study structure for your years in FTMK is documented in this Academic Handbook. This handbook is your primary reference for preparing your study plan. It is structured into four major topics: program educational objectives, faculty's rules and facilities, academic system, and curriculum structure.

Students will have a great learning experience from our lecturers of various backgrounds, modes of delivery, lab facilities and great support from faculty. Besides, great amenities are provided by the university.

Last but not least, FTMK would like to express our appreciation to the Faculty Publication Committee and all parties involved in producing this academic handbook.

FTMK Truly World!

All the best and Good Luck!

**Assoc.Prof. Ts. Dr. Mohd Sanusi bin Azmi**

*Dean*

*Faculty of Information and Communication Technology*

*Universiti Teknikal Malaysia Melaka*

## Faculty Vision, Mission and Objectives

### **Faculty Vision:**

To become a creative, innovative and world class centre of excellence in education, research and services of information and communication technology field.

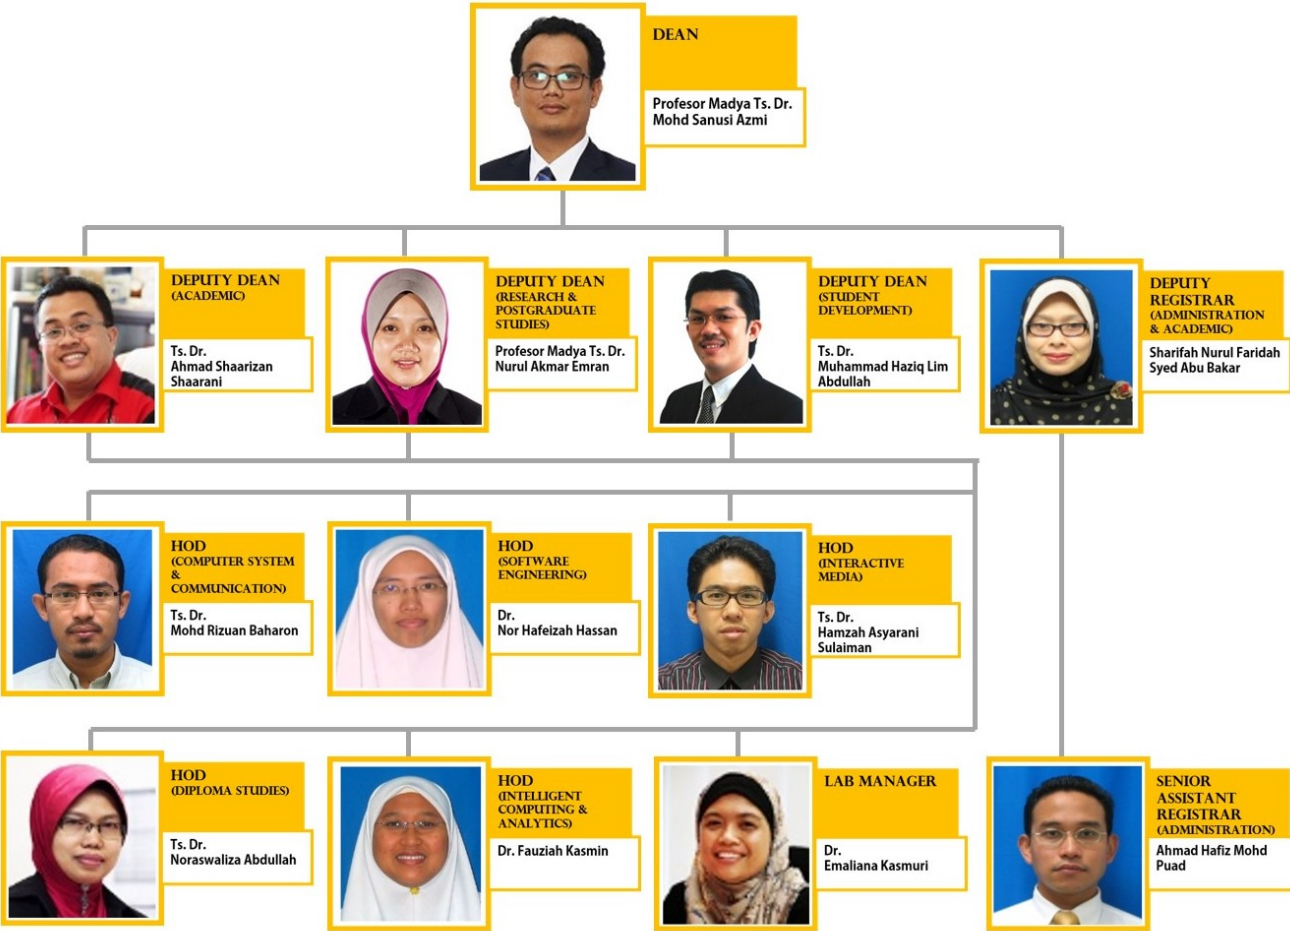

### **Faculty Mission:**

To develop highly competent professionals with outstanding personalities through a world class technical education on the basis of application-oriented teaching, learning and research with smart partnership with industry and university.

### **Faculty Objectives:**

- i) To create ethical, competent and skilful ICT professionals of local, international and industry's choice.
- ii) To spearhead and develop applied research in the ICT field to produce new knowledge and innovative technology needed by the industry which can be commercialized and recognized internationally.
- iii) To improve staff professionalism and competence and contribute to university income through consultation, professional training and continuous quality teaching.
- iv) To improve ICT understanding, promote ICT culture in the society and provide social services which leads to social well-being and economic development.
- v) To create continuous smart partnership with local and foreign industry and institutions of excellence.
- vi) To develop high quality infrastructure and faculty administration system and support programme development to achieve faculty objectives.

Faculty's Management

## FTMK at a Glance

Faculty of Information and Communication Technology, for short FTMK, was one of the earliest formed faculty at Kolej Universiti Teknikal Malaysia Melaka (KUTKM) on the 1st December 2000. The faculty started to operate on 22nd June 2001 with its pioneer batch of students for academic session 2001/2002. Since 1st February 2007, Kolej Universiti Teknikal Malaysia Melaka (KUTKM) is known as Universiti Teknikal Malaysia Melaka (UTeM).

The faculty established five (5) departments as below:

- 1) Department of Software Engineering.
- 2) Department of Computer System and Communication.
- 3) Department of Interactive Media.
- 4) Department of Intelligent Computing and Analytics.
- 5) Department of Diploma Studies.

## Department of Software Engineering

Software Engineering is a field of knowledge about computer software development using structured methods, techniques and schemes. In line with this, the Department of Software Engineering offers two bachelor programmes of Computer Science namely Software Development and Database Management. This department plays a major role in producing competent and professional software engineers to design and develop highly sophisticated and complex applications including Intelligent Systems. Our programmes have been designed carefully to produce professionals in software engineering with a combination of various technical aspects, soft skills and ethics.

The graduates are expected to understand the users, software and system requirements, competent in applying emerging software technologies design, manage, perform testing, maintain and develop the system with software engineering methodology. We also ensure that our graduates are equipped with project management skills, work ethics, risk management knowledge and the importance of team work in software development processes. The objective of specialization in Database Management is to produce skilled professionals in Database Management. The course equips the graduates with various skills such as database

analysis, design and development based on the system specifications. The students will also be exposed to data warehouse and data mining techniques. Application oriented approach could also produce highly competitive and creative software engineers in the job market.

### Department of Interactive Media

The Department of Interactive Media offers undergraduate and graduate programmes in the area of multimedia. In addition to the basic courses in ICT, the programmes offered by this department focus on the concept of interactivity in the design and development of high quality multimedia products and web sites. This also includes applying the knowledge of interactivity in the area of computer graphics, animation, digital audio video technology, virtual reality and computer games development. With the emphasis on training and hands-on approach, we believe that the graduates are able to fulfill the job markets in the field of multimedia.

### Department of Computer System and Communication

Computer System and Communication is a sub field of computer and telecommunication. The Internet is created based on communication systems that produce a complex computer networks which is built for LANs, MANs, WANs, mobile networks and massive global Internet in order to share information and having a human conversation with one another. Due to the necessity of computer networks towards the use of Internet in daily activities, Bachelor of Computer networking and Bachelor of Computer Security are introduced and act as the major bachelor programmes offered by Department of Computer System and Communication, to fulfill the nation's need. Besides, students who have undergo this course are not only be knowledgeable and become expert in the area but also equipped with the professional certification for career advancement such as CompTIA and Cisco Academy certifications. Thus, students are more confident, creative and ready to face the challenges in real life in working environment.

In addition, throughout this programme, students are provided with fundamental of information technology subjects and are exposed with more advanced subjects that comprises of planning, designing, developing, troubleshooting and managing computer systems, computer networks and network security.

## Department of Intelligent Computing and Analytics

Malaysia's vision to become a developed country must be supported by the profound knowledge in advanced industrial technology. Hence, the Department of Intelligent Computing and Analytics was established to fulfill such aspiration by focusing on ICT applications in intelligent automation and augmented analytics. Intelligent automation is being used in many fields, from robotics and autonomous vehicles to cognitive computing and controlling quality, efficiency and business functionality that integrates multiple artificial intelligence, as well as machine learning and automation capabilities that tracks and automate business process and workflows. Augmented analytics on the other hand, is the next wave and the future trend to data and analytics. It is an approach that uses machine learning and natural language processing to automate insights by performing activities which includes data preparation, deciphering data pattern and building model as well as distribute and operationalizing data findings. Providing knowledge in both topics therefore prepares the students to stay at par with the needs and trends of the industry.

## Department of Diploma Studies

Department of Diploma Studies is aimed to produce trained students in the field of computer technology and commercial computer application to meet the high demands from the government and private sectors. The programme is intended to produce students with knowledge in computer applications and programming. The students will also obtain professional certification as CCNA.

## Postgraduate Coordinator & Programme Coordinators

### **POSTGRADUATE COORDINATOR:**

Assoc. Prof. Ts. Dr. Siti Rahayu Selamat

### **PROGRAMME COORDINATORS:**

- 1) **Master of Computer Science (Software Engineering), MITS**  
Ts. Dr. Lizawati binti Salahuddin
- 2) **Master of Computer Science (Database Technology), MITD**  
Ts. Noor Azilah Draman@Muda
- 3) **Master of Computer Science (Internetworking Technology), MITI**  
Ts. Dr. Syarulnaziah binti Anawar
- 4) **Master of Computer Science (Security Science), MITZ**  
Assoc. Prof. Ts. Dr. Siti Rahayu binti Selamat
- 5) **Master of Computer Science (Multimedia Computing), MCSM**  
Ts. Dr. Siti Nurul Mahfuzah binti Mohamad
- 6) **Master of Technology (Data Science & Analytics), MTDS**  
Ts. Dr. Halizah binti Basiron
- 7) **Master of Software Engineering (Mobile Development), MSMD**  
Ts. Dr. Abdul Karim bin Mohamad

## Facilities

### **Lab Facilities**

Faculty of Information and Communication Technology (FTMK) has been equipped with the state-of- art computers and software and integrated into UTeM Network. These facilities ease the process of teaching and learning in FTMK.

Averages of 36 computers with latest software are located at each lab and studio to ensure application oriented teaching and learning is applicable for the students. Server, router, switches, wireless, digital camera, video, biometric machines are also provided for teaching and learning purposes.

### **Lab Staffs**

The labs in FTMK are administered by the Lab Coordinator assisted by Assistant Engineers to ensure smooth teaching and learning processes. The infrastructure committee members are responsible for maintaining and managing respective clients in FTMK environment.

### **Loan Facilities on Lab Equipment**

Students are allowed to loan the lab equipment to complete their assignments or projects on time. The equipments that are allowed to be used are wireless equipment, video camera, digital camera, biometric tool and others.

### **Lab Operational Hours**

During Semester:

Monday to Thursday	8:00am to 5:00pm
Friday	8:00am to 12:15pm 2:45pm to 5:00pm

During Semester Break:

Monday to Thursday	8:00am to 5:00pm
Friday	8:00am to 12:15pm 2:45pm to 5:00pm

Saturday-Sunday / Public Holidays    Close

NAME OF FACILITY	DESCRIPTION
Seminar Hall	The hall is equipped with audio-visual facility for 250 pax at a time
Lecture Rooms	Rooms No. 1 to 12 with each room for 60 pax Rooms No. 13 to 14 with each room for 120 pax
Recording Capture System (ReCap)	Mini Theatre for interactive learning environment for 114 pax
Collaborative Learning Laboratory (CLeAR)	A collaborative learning laboratory with 60 pax capacity
Mini Theatre	The theatre room for student animation presentation for 15 pax
Virtual Reality Studio	Laboratory for motion capture and games development
Photography/Recording Studio	Multimedia recording and editing studio
Research Laboratories	<ol style="list-style-type: none"><li>1. Innovative Software System &amp; Services (IS3) Laboratory</li><li>2. Information Security Forensics &amp; Computer Networking (INSFORNET) Laboratory</li><li>3. Optimization, Modelling, Analytics and Simulation (OptiMAS) Laboratory</li><li>4. Computational Intelligence and Technologies (CIT) Laboratory</li><li>5. Human Centered Computing and Information Systems Lab (HCC-ISL) Laboratory</li><li>6. Pervasive Computing &amp; Educational Technology (PET) Laboratory</li><li>7. Biomedical and Engineering (BIOCORE) Laboratory</li></ol>

University-Industry Centre	UTeM Cybersecurity Competency Centre - collaboration with CyberSecurity Malaysia, ASK-Pentest, Ministry of Higher Education
University-Industry Laboratory	Coordinated Malware Eradication and Remediation Project (CMERP) Satellite Laboratory – collaboration with Cyber Security Malaysia
Teaching Laboratories	<ol style="list-style-type: none"><li>1. Computer Game Laboratory</li><li>2. Software Engineering Lab 1, 2 and 3</li><li>3. Programming Laboratory 1, 2, 3 and 4</li><li>4. Database Laboratory 1, 2 and 3</li><li>5. Network Laboratory 1 and 2</li><li>6. CCNA &amp; CCNP Laboratory</li><li>7. Fiber Optic Laboratory</li><li>8. Security Laboratory</li><li>9. System / Hardware Laboratory</li><li>10. Wireless Laboratory</li><li>11. Virtual Reality Laboratory</li><li>12. Multimedia Laboratory 1, 2, 3 and 4</li><li>13. Artificial Intelligence Laboratory 1, 2, 3 and 4</li><li>14. Student Workshop Laboratory</li></ol>
Other Facilities	<ol style="list-style-type: none"><li>1. Visiting Professor Rooms</li><li>2. Executive Laboratory</li><li>3. Administration Office – Level 2 &amp; 3</li><li>4. FICTS Room</li><li>5. Student Common Room</li><li>6. Surau or Prayer Room</li><li>7. Lobby Area</li><li>8. Parking Area for students and staffs</li></ol>

## Lab Usage Regulation

1. Students must display their matric card at all times in the lab.
2. Students are not allowed to bring in their bags into the lab.
3. Students are not allowed to eat/drink or bring in any foods or drinks into the lab.
4. Students are not allowed to wear sandals in the lab except sandals with back straps for female students and covered sandals for male students.
5. Students are not allowed to wear t-shirt without collar in the lab. UTeM's students' dress code is referred.
6. All lab equipment used must be returned in its original condition.
7. Chairs must be arranged neatly after use.
8. Don't leave used papers or litters in the lab. Please throw it into rubbish bin if it is not needed anymore.
9. All equipment must be switched off after used.
10. Students should not enter the lab without lecturers' or tutors' presence.
11. For after-hours lab usage, students must record their details in the lab record book and submit their matric card to Assistant Engineers in duty.
12. Students are prohibited from playing games, chatting or surfing the net for unrelated content in the lab.
13. Students are not allowed to bring out any lab equipment except with permission from the lecturers or Assistant Engineers in duty.
14. Students are not allowed to bring in laptop, CPU, monitor, mouse, CD, VCD or any computer equipment except with permission from the lecturers or Assistant Engineers in duty.
15. Users are not allowed to do any installation on computers in the lab.
16. All requests for software installation into students' laptop will not be entertained.

17. Students must report immediately to lecturer or Assistant Engineers on duty if any lab equipment got lost or broken during their students' usage.
18. Students must report immediately to lecturer or Assistant Engineers on duty if there is any lab equipment that is lost or broken prior to the students' usage.
19. Research labs are for post graduates' students ONLY. Post-graduate students can get the access by referring to their supervisor.
20. Any matters related to lab usage after teaching and learning must be directed to Lab Coordinator of FTMK.

DISCIPLINARY ACTIONS WILL BE TAKEN AGAINST ANY STUDENT WHO IS FOUND BREAKING ANY RULE LISTED ABOVE.

## Duration of Studies

	Minimum	Maximum
Duration of studies (Full Time)	1 year (2 normal semesters and 1 short semesters)	3 years (6 normal semesters and 2 short semesters)
Duration of studies (Part Time)	2 years (4 normal semesters and 2 short semesters)	4 years (8 normal semesters and 4 short semesters)

## Academic System

The university has implemented its academic system according to semester system. The semester system is widely used in local higher learning institutions in Malaysia.

While student's achievement in courses taken is shown by grades. The relationship between marks, grades and evaluation points is shown in the following table.

Marks	Letter Grades	Grade Points	Remarks	Credit Hours Earned
80 - 100	A	4.0	Excellent	Yes
75 - 79	A–	3.7	Very Good	Yes
70 - 74	B+	3.3	Good	Yes
65 - 69	B	3.0	Pass	Yes
60 - 64	B–	2.7	Conditional Pass (Redeemable)	Yes
55 - 59	C+	2.3	Fail	No
50 - 54	C	2.0	Fail	No
47 - 49	C–	1.7	Fail	No
44 - 46	D+	1.3	Fail	No
40 - 43	D	1.0	Fail	No
0 - 39	E	0.0	Fail	No

## Entry Requirements

### **University General Requirements:**

- a) A Bachelor's Degree in Computing or its equivalent from UTeM or any other institutions of higher learning recognised by the Senate, with a minimum CGPA of 2.75; OR
- b) A Bachelor's Degree in Computing or its equivalent, with a minimum CGPA of 2.50 and not meeting CGPA of 2.75, can be accepted subject to rigorous internal assessment process; OR
- c) A Bachelor's Degree in Computing or its equivalent, with CGPA less than 2.50, with a minimum of 5 years working experience in a relevant field may be accepted.

*Note: For candidates without Computing Degree, prerequisite modules in computing must be offered to adequately prepare them for their advanced study.*

### **Language Requirements:**

For international applicants, the following additional requirements must be fulfilled:

- a) Minimum score is 520 for the Test of English as a Foreign Language (TOEFL) or minimum score is 5.0 for the International English Language Testing System (IELTS) or minimum band 3.0 for Malaysian University English Test (MUET).
- b) Applicants without TOEFL/IELTS or for those who obtained a score below the requirement above are required to undergo and pass the English language programme conducted by UTeM prior to commencement of the postgraduate programme.
- c) Exemption may be given to those who have undertaken regular programmes of studies and graduated from universities that use English as the medium of instruction or who has graduated from UTeM in a programme with English as the medium of instruction.

**\*\* Programme's Specific Requirements:**

- a) A Bachelor's Degree (honours) in area focusing on numeracy skills including computing, engineering, mathematics, physical sciences and other fields that have sound statistical and computing background, with good grades (minimum CGPA of 2.75 or equivalent) from UTeM or any other institutions of higher learning recognised by Senate.
- b) Candidates without a computing degree need to complete bridge/prerequisites courses prior to the enrollment into the programme.
- c) Waiver to bridge/prerequisites courses may be granted if an equivalent course has already been successfully completed, or prove of relevant work experience, that are recognised by the Senate

*\*\* only apply for Master of Technology and Master of Software Engineering*

# **MASTER OF COMPUTER SCIENCE (SOFTWARE ENGINEERING)**

## **MASTER OF COMPUTER SCIENCE (SOFTWARE ENGINEERING)**

The Master of Computer Science (Software Engineering), for short MITS, is specifically designed to equip students with knowledge and technical skills on software engineering and software engineering management that can meet industry needs.

### **Programme Educational Objectives (PEO)**

Programme Educational Objectives (PEO) are specific goals describing the expected achievement of graduates in their career and professional life after 5 years of graduation.

Below are the PEO for this programme:

- PEO1:** Practice in-depth knowledge and skills of Computer Science with specialization in Software Engineering field.
- PEO2:** Demonstrate effective leadership and communication to a wide variety of audiences or multi-disciplinary teams, tolerate and value different global perspectives and cultures towards lifelong learning.
- PEO3:** Demonstrate knowledge of current issues in technology through learning and research activities using scientific methods.
- PEO4:** Practice professional, ethical and societal responsibilities, and show adaptability in different roles and surroundings in contributing to the community and business.

## Programme Outcomes (PO)

Programme Outcomes (PO) are statements describing what students are expected to know and be able to perform or attain by the time of graduation. These are related to the Knowledge (K), Skills (S), and Attitude (A) that students acquire throughout the programme.

Below is the list of PO for this programme:

- PO1:** Demonstrate originality and independence in undertaking analytical and critical evaluation, and synthesis of complex information, specialized concepts, theories, methods and practice in Computer Science;
- PO2:** Apply knowledge critically and collectively to manage and resolve complex problems or issues in field of software engineering;
- PO3:** Apply the practical skill in working environment related to software engineering field;
- PO4:** Communicate effectively the knowledge, skills, ideas, critique and rationale in both written and verbal forms using appropriate methods to peers, experts, and non-experts;
- PO5:** Competently use a wide range of suitable digital technologies and quantitative mechanisms to design and plan evaluation activities for enhancing study, research and practice;
- PO6:** Demonstrate significant autonomy, independence and leadership skills at work and class with self-advancement through continuous academic or professional development; and
- PO7:** Initiate or lead entrepreneurial projects and adhere to legal, ethical, professional and sustainable practices.

Programme Structure - Full Time**September Intake:**

<b>Semester 1 (September)</b>		
<b>Course Code</b>	<b>Course</b>	<b>Credit</b>

## Course Details

### **MPSW 5013 Research Methodology:**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Apply ethical research skills in constructing research questions, objectives and hypothesis (if any) relevant to the research problem.
- CLO2: Synthesize relevant literature to address the knowledge gaps.
- CLO3: Develop research proposal with an improvement of existing knowledge.

#### Synopsis:

The primary goal of this course is to provide students with the necessary knowledge and skills in preparing for their Master dissertation. In this course, students will be exposed to the important concepts of conducting scientific research and managing ethical research. The course is designed to introduce students to the principles and good practices of conducting research. Activities at each step of the research process will be elaborated in order to develop the skills and competencies required to facilitate a successful research project at postgraduate level. At the end of the course, students are expected to submit a research proposal relevant to their field of study.

## MPSW 5063 Entrepreneurship

### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Analyse entrepreneurial skills in identifying and exploiting entrepreneurial opportunities.
- CLO2: Apply commercially viable ideas, projects, products prototypes for commercialization within the context of societal framework and to deliver business model canvassing and business value proposition.
- CLO3: Develop creative and viable high tech business models and strategies.

### Synopsis:

The objectives of this course are to provide students a robust foundation in theories relevant to the improvement of entrepreneurial behaviour and capabilities in the context of technology ventures and to stimulate them to think and behave like an entrepreneur. First, the course covers fundamental issues such as the influence of risk and uncertainty, the role of technology in entrepreneurship, opportunity recognition, business model creation, life cycle and key stages of the entrepreneurial business and the development of an operational and financial foundation of a technology venture. Second, the course provides students with actionable knowledge by familiarising them

with the areas of entrepreneurial expertise necessary in order to found and/or grow a technology venture.

**MPSW 5073 Project Management****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyze the core concepts and principles, functions, and process in project management.
- CLO2: Develop a comprehensive & viable project proposal.
- CLO3: Evaluate best practices and methodology in project management.

**Synopsis:**

This subject focuses on the principles of project management based on Project Management Body of Knowledge (PMBOK). Students will be familiarized with the Project Management process group functions (initiating, planning, executing, controlling and closing) and project knowledge areas (integration, scope, time, cost, quality and human resources). Various tools for supporting the analysis of works in project management will be introduced. Topics including initiating and planning the project, working with the management, project appraisal & sensitivity, work breakdown structure, managing uncertainty, building project plan, implementing and revising project plan, completing the project and contract laws. Microsoft Project (MS Project) will be introduced as project management software tools.

5. Trevor L Young, Successful Project Management, Kogan Page Publishers, 2016.

**MPSW 5033 Engineering Technology Management****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Identify the principles of engineering management and technology management across different industries.
- CLO2: Apply relevant issues in engineering management and technology management across different industries.
- CLO3: Analysis the impact of relevant issues in the context of engineering

management and technology management across different industries.

#### Synopsis:

The course consists of two components, i.e., Engineering Management and Technology Management. Topics in Engineering Management provide a vehicle for engineers and technical specialist to enhance their knowledge on management, organizational structure and behavior of engineering/technical organizations. Additional topics will enhance the knowledge and competencies in the management of engineering activities such as design, operations, and quality. The Technology Management part of the course will equip students with contemporary views and tools on management of technology and its impact on an organization. It emphasizes management of innovation and new product development as well as managing technology and knowledge. The interaction of technology and the law, particularly the knowledge management and intellectual property will be covered.

### **MPSW 5053 Quality Systems Management**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Explain the conceptual understanding of Quality.
- CLO2: Identify Quality System Management information.
- CLO3: Propose Quality System Management techniques and tools in the practice of organizations.

#### Synopsis:

This course presents the fundamental elements of Quality Management System including the importance of quality as a strategy for continuous improvement in business performance. It explains the strategies for

competitive quality in design and manufacture as well as in terms of customer supply chain concept of total quality aspect. Such topics include Management systems ISO, variability, Six Sigma, Taguchi method, failure mode and effect analysis (FMEA) and quality function deployment. Several quality control tools such as Pareto chart, bar chart and scatter diagram will be cover in statistical data collection, measurement and analysis. Finally, concepts of benchmarking and ISO standards with respect to control elements will be integrated with the Total Quality Management (TQM) as part of quality Management system.

### MITU 5213 Project 1

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Formulate the problems, objectives and scope based on complex technology solutions.
- CLO2: Perform literature review and appropriate methodology to complete the project.
- CLO3: Defend the proposed project solutions in written and verbal forms.

#### Synopsis:

This course is the first part of project that requires a student to prepare a master research proposal based on the theories and techniques of technologies learnt previously. Student is required to write three chapters of dissertation i.e. Chapter 1: Introduction, Chapter 2: Literature Review and Chapter 3: Research Methodology. Besides writing the proposal, student needs to present and defend his/her proposal. Student is expected to demonstrate ability to identify and propose solutions to the identified problems.

and Mixed Methods Approaches, 5th Edition, California: SAGE Publications, Incorporated, 2020.

## **MITU 5226 Project 2**

### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Demonstrate solutions to the proposed project.
- CLO2: Verify solutions to understand the strengths, weaknesses and limitations of the project.
- CLO3: Defend the contributions of the project in written and verbal forms.

### **Synopsis:**

This course is the second part of project that show the ability of student in applying the theories and techniques of technologies learnt previously. Student must write the second fold of dissertation which consists of four chapters of dissertation i.e. Chapter 4: Analysis & Design, Chapter 5: Implementation, Chapter 6: Evaluation and Chapter 7: Conclusion & Future Works. These chapters must align with the proposed solution developed as the end product of this project. Student is required to justify the contribution of the proposed solution throughout the presentation sessions.

## **MITP 5113 Algorithm Analysis and Design**

### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Identify algorithm design technique and method of analysis.
- CLO2: Explain algorithms efficiency in terms of the amount of resources, which are time and storage space required to execute the algorithm.
- CLO3: Explain algorithm design technique based on problem type.

### **Synopsis:**

This course introduces the students to the fundamentals principles of design and analysis of algorithms. It covers formal techniques to support the design and analysis of algorithms that emphasizes on both the underlying mathematical theory and practical considerations of efficiency. By learning a range of algorithm design techniques

as Brute Force, Divide & Conquer, Decrease & Conquer, Transform and Conquer, Greedy Algorithms and Dynamic Programming, students should be able to develop efficient algorithms for simple computational tasks and reasoning about the correctness of them. Through the complexity measures, different range of behaviors of algorithms and the notion of tractable and intractable problems will be discussed.

### **MIT 5313 Advanced Data Communications and Network**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Evaluate the theory of data communications related to the network models in current technologies.
- CLO2: Manipulate the implementation in managing network infrastructure and services with the emerging trends and technologies.
- CLO3: Relate the present research in data communications and networking in order to apply in the real environment based on the concept.

#### Synopsis:

This course introduces the fundamental concepts and terminology of data communication and networking, encompassing both technical and managerial aspects and to help students better understand the challenges and opportunities faced by modern business. Topics will include fundamentals of telecommunications, data transmission mechanisms, telecommunication media and technologies, considerations for LAN and WAN implementations, the Internet and intranet applications, emerging telecommunications technologies, and trends in the telecommunications industry. Students will also be able to understand, explain and ap-

ply the fundamentals of data communication and network technology concepts and skills in network applications, troubleshooting, and configuring the computer networks using guided or unguided media.

### **MITP 5244 Advanced Software Project Management**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Analyse various methodologies to improve success of a software project.
- CLO2: Display the best-practices for cross-functional teams in a software project.
- CLO3: Propose a risk management plan for managing risk activities on a software project.

#### Synopsis:

This course involves managing a project from inception to completion and the successful attainment of the project's objectives. The course provides the opportunity to gain the understanding, knowledge and skills necessary for performing the role of project manager in leading a cross-functional team in a certain project. It also exposes students to analyse project methodologies in managing and monitoring people, budget and schedule as well as to manage risks that might occur in a software project.

### **MITP 5213 Advanced Software Engineering**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyze the concepts and develop a contemporary knowledge of software engineering.
- CLO2: Explain software engineering methodology or model with the appropriate concepts in an efficient and ethical manner.
- CLO3: Integrate different software engineering methodology or models for problem solving applications.

#### **Synopsis:**

This course provides students with software engineering methodology, knowledge,

skills and discipline in developing application software. The course exposes student to Enterprise Architecture approach in software engineering process including software development process and technique, requirement engineering, software testing and quality, and software cost estimation. At the end of the course the student should be able to manage a software development project effectively and systematically, and produce a software product in a quality manner.

### **MITP5233 Requirements Engineering**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyse the concept of requirements engineering process in software development practice.
- CLO2: Discriminate the best techniques to improve problem understanding, requirements elicitation, analysis, specification and validation.
- CLO3: Prepare quality software requirements specifications through requirements engineering best practices..

#### Synopsis:

Requirements are a critical factor in the success or failure of software engineering projects. A large proportion of errors detected in released software can be traced back to faulty requirements or a poor understanding of the problem domain. The aim of this course is to explore the development of requirements, to provide a deeper understanding of requirements engineering process, the role and impact of requirements on software projects and the techniques and tools for improving problem understanding, requirements analysis and requirements specification.

### MITP 5263 Software Testing

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Recommend a suitable software testing level, types and techniques in software development.
- CLO2: Perform software testing activity in software projects.
- CLO3: Practice testing management ethically to assure software quality using testing techniques and tools.

#### Synopsis:

This course discusses software faults and techniques to reduce defects and improve software quality. Software systems are some of the most complex human artefacts ever built and some of the most critical means

to ensure our safety, wellbeing, and prosperity. This course covers techniques to ensure software systems perform their function correctly. The course will discuss how tests can be derived from requirements and specifications, design artefacts, or the source code, and introduce proper testing tools used in several exercises.

### MITP 5253 Software Quality

#### Learning Outcomes:

At the end of the course, students should be able to:

CLO1: Explain software quality assurance, standards, metrics and measurements.

CLO2: Integrate the current scenario or issues related to software quality topics.

CLO3: Practice software quality assurance plan which include organization, procedure, documentation, standard model measurement and metrics.

#### Synopsis:

The course discuss on quality term as a multifaced concept which can be described from many perspectives. Then this quality issues is extended into software context where assuring software quality is critical in software development. Therefore an organization requires planned quality assurance to ensure quality embedded into the software. Software metrics are tools of measurement attributes of a system, component or process possess a given attribute are essential in software engineering. The use of process standards in the entire software development and product standards are also integral part of assuring quality.

### **MITP 5273 Secure Software Development**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Evaluate suitable secure software development models, methodologies and techniques to be used in the software development lifecycle.
- CLO2: Prepare secure software development activities for software projects.
- CLO3: Propose appropriate techniques and tools to develop secure software systems.

#### **Synopsis:**

This course discusses software faults and techniques to reduce defects and improve software quality. Software systems are some of the most complex human artefacts ever built and some of the most critical means to ensure our safety, wellbeing, and prosperity. This course covers techniques to ensure software systems perform their function correctly. The course will discuss how tests can be derived from requirements and specifications, design artefacts, or the source code, and introduce proper testing tools used in several exercises.

**MITP 5563 Advanced Database System Principles****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Explain advanced data modeling concepts, query processing and issues in designing, developing and managing database systems.
- CLO2: Construct advanced data model and queries based on user requirements of a database system.
- CLO3: Identify various issues in managing database systems such as security, data quality and ethics.

**Synopsis:**

Understanding how to analyze and model the data in the organization is fundamental to the management of databases. This course will have advanced topics component that aim at knowledge regarding the implementation of database management systems as well as insights into the development and administration of database systems in various environments. This course explores key aspects of database system analysis, design and implementation, focusing on various topics from advanced concepts in modeling, query processing, performance tuning, transaction management and other current issues.

**MSMD 5123 Internet of Things Application Development****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Discover convergence of technologies and emerging applications of IoT.
- CLO2: Evaluate of IoT products, platforms, and applications.

CLO3: Design and develop smart IoT applications.

Synopsis:

The student will learn to develop Internet of Things (IoT) applications for various purposes on the latest cloud and mobile phone platforms. The Internet of Things allows billions of devices, sensors, cloud infrastructure and business intelligence tools to come together to enable people to make informed decisions. This helps businesses to drive more innovation and services. Graduates from this course would be in high demand as they would have acquired the right skills to develop smart applications and services to respond to industry's needs. This course covers the concepts of the Internet of Things (IoT), its conceptual framework and how the IoT contributes to business and daily life. It will also cover the IoT architecture and gives an overview of the core technologies required for supporting IoT. It also provides knowledge on both the underlying technolo-

gies which support IoT and M2M communications, and engages the students in the creative development of simulation scenarios for innovative Internet of Things applications.

**MASTER OF COMPUTER SCIENCE  
(DATABASE TECHNOLOGY)**

## MASTER OF COMPUTER SCIENCE (DATABASE TECHNOLOGY)

This programme is specifically designed to equip students with the knowledge and technical skills on technology, design and database management that can meet industry needs.

### Programme Educational Objectives (PEO)

Programme Educational Objectives (PEO) are specific goals describing the expected achievement of graduates in their career and professional life after 5 years of graduation.

Below are the PEO for this programme:

- PEO1:** Practice in-depth knowledge and skills of Computer Science with specialization in Database Technology field.
- PEO2:** Demonstrate effective leadership and communication to a wide variety of audiences or multi-disciplinary teams, tolerate and value different global perspectives and cultures towards lifelong learning.
- PEO3:** Demonstrate knowledge of current issues in technology through learning and research activities using scientific methods.
- PEO4:** Practice professional, ethical and societal responsibilities, and show adaptability in different roles and surroundings in contributing to the community and business.

## Programme Outcomes (PO)

Programme Outcomes (PO) are statements describing what students are expected to know and be able to perform or attain by the time of graduation. These are related to the Knowledge (K), Skills (S), and Attitude (A) that students acquire throughout the programme.

Below is the list of PO for this programme:

- PO1:** Demonstrate originality and independence in undertaking analytical and critical evaluation, and synthesis of complex information, specialized concepts, theories, methods and practice in Computer Science;
- PO2:** Apply knowledge critically and collectively to manage and resolve complex problems or issues in field of database technology;
- PO3:** Apply the practical skill in working environment related to database technology field;
- PO4:** Communicate effectively the knowledge, skills, ideas, critique and rationale in both written and verbal forms using appropriate methods to peers, experts, and non-experts;
- PO5:** Competently use a wide range of suitable digital technologies and quantitative mechanisms to design and plan evaluation activities for enhancing study, research and practice;
- PO6:** Demonstrate significant autonomy, independence and leadership skills at work and class with self-advancement through continuous academic or professional development; and
- PO7:** Initiate or lead entrepreneurial projects and adhere to legal, ethical, professional and sustainable practices.

Programme Structure - Full Time**September Intake:**

<b>Semester 1 (September)</b>

## Course Details

### **MPSW 5013 Research Methodology:**

#### Learning Outcomes:

At the end of the course, students should be able to:

CLO1: Apply ethical research skills in constructing research questions, objectives and hypothesis (if any) relevant to the research problem.

CLO2: Synthesize relevant literature to address the knowledge gaps.

CLO3: Develop research proposal with an improvement of existing knowledge.

#### Synopsis:

The primary goal of this course is to provide students with the necessary knowledge and skills in preparing for their Master dissertation. In this course, students will be exposed to the important concepts of conducting scientific research and managing ethical research. The course is designed to introduce students to the principles and good practices of conducting research. Activities at each step of the research process will be elaborated in order to develop the skills and competencies required to facilitate a successful research project at postgraduate level. At the end of the course, students are expected to submit a research proposal relevant to their field of study.

**MPSW 5063 Entrepreneurship****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyse entrepreneurial skills in identifying and exploiting entrepreneurial opportunities.
- CLO2: Apply commercially viable ideas, projects, products prototypes for commercialization within the context of societal framework and to deliver business model canvassing and business value proposition.
- CLO3: Develop creative and viable high tech business models and strategies.

**Synopsis:**

The objectives of this course are to provide students a robust foundation in theories relevant to the improvement of entrepreneurial behaviour and capabilities in the context of technology ventures and to stimulate them to think and behave like an entrepreneur. First, the course covers fundamental issues such as the influence of risk and uncertainty, the role of technology in entrepreneurship, opportunity recognition, business model creation, life cycle and key stages of the entrepreneurial business and the development of an operational and financial foundation of a technology venture. Second, the course provides students with actionable knowledge by familiarising them

with the areas of entrepreneurial expertise necessary in order to found and/or grow a technology venture.

**MPSW 5073 Project Management****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyze the core concepts and principles, functions, and process in project management.
- CLO2: Develop a comprehensive & viable project proposal.
- CLO3: Evaluate best practices and methodology in project management.

**Synopsis:**

This subject focuses on the principles of project management based on Project Management Body of Knowledge (PMBOK). Students will be familiarized with the Project Management process group functions (initiating, planning, executing, controlling and closing) and project knowledge areas (integration, scope, time, cost, quality and human resources). Various tools for supporting the analysis of works in project management will be introduced. Topics including initiating and planning the project, working with the management, project appraisal & sensitivity, work breakdown structure, managing uncertainty, building project plan, implementing and revising project plan, completing the project and contract laws. Microsoft Project (MS Project) will be introduced as project management software tools.

5. Trevor L Young, Successful Project Management, Kogan Page Publishers, 2016.

**MPSW 5033 Engineering Technology Management****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Identify the principles of engineering management and technology management across different industries.
- CLO2: Apply relevant issues in engineering management and technology management across different industries.
- CLO3: Analysis the impact of relevant issues in the context of engineering

management and technology management across different industries.

### Synopsis:

The course consists of two components, i.e., Engineering Management and Technology Management. Topics in Engineering Management provide a vehicle for engineers and technical specialist to enhance their knowledge on management, organizational structure and behavior of engineering/technical organizations. Additional topics will enhance the knowledge and competencies in the management of engineering activities such as design, operations, and quality. The Technology Management part of the course will equip students with contemporary views and tools on management of technology and its impact on an organization. It emphasizes management of innovation and new product development as well as managing technology and knowledge. The interaction of technology and the law, particularly the knowledge management and intellectual property will be covered.

## **MPSW 5053 Quality Systems Management**

### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Explain the conceptual understanding of Quality.
- CLO2: Identify Quality System Management information.
- CLO3: Propose Quality System Management techniques and tools in the practice of organizations.

### Synopsis:

This course presents the fundamental elements of Quality Management System including the importance of quality as a strategy for continuous improvement in business performance. It explains the strategies for

competitive quality in design and manufacture as well as in terms of customer supply chain concept of total quality aspect. Such topics include Management systems ISO, variability, Six Sigma, Taguchi method, failure mode and effect analysis (FMEA) and quality function deployment. Several quality control tools such as Pareto chart, bar chart and scatter diagram will be cover in statistical data collection, measurement and analysis. Finally, concepts of benchmarking and ISO standards with respect to control elements will be integrated with the Total Quality Management (TQM) as part of quality Management system.

### MITU 5213 Project 1

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Formulate the problems, objectives and scope based on complex technology solutions.
- CLO2: Perform literature review and appropriate methodology to complete the project.
- CLO3: Defend the proposed project solutions in written and verbal forms.

#### Synopsis:

This course is the first part of project that requires a student to prepare a master research proposal based on the theories and techniques of technologies learnt previously. Student is required to write three chapters of dissertation i.e. Chapter 1: Introduction, Chapter 2: Literature Review and Chapter 3: Research Methodology. Besides writing the proposal, student needs to present and defend his/her proposal. Student is expected to demonstrate ability to identify and propose solutions to the identified problems.

2. Cresswell, J. W., and Creswell, J.D., Research Design: Qualitative, Quantitative,

and Mixed Methods Approaches, 5th Edition, California: SAGE Publications, Incorporated, 2020.

## **MITU 5226 Project 2**

### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Demonstrate solutions to the proposed project.
- CLO2: Verify solutions to understand the strengths, weaknesses and limitations of the project.
- CLO3: Defend the contributions of the project in written and verbal forms.

### **Synopsis:**

This course is the second part of project that show the ability of student in applying the theories and techniques of technologies learnt previously. Student must write the second fold of dissertation which consists of four chapters of dissertation i.e. Chapter 4: Analysis & Design, Chapter 5: Implementation, Chapter 6: Evaluation and Chapter 7: Conclusion & Future Works. These chapters must align with the proposed solution developed as the end product of this project. Student is required to justify the contribution of the proposed solution throughout the presentation sessions.

## **MITP 5113 Algorithm Analysis and Design**

### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Identify algorithm design technique and method of analysis.
- CLO2: Explain algorithms efficiency in terms of the amount of resources, which are time and storage space required to execute the algorithm.
- CLO3: Explain algorithm design technique based on problem type.

### **Synopsis:**

This course introduces the students to the fundamentals principles of design and analysis of algorithms. It covers formal techniques to support the design and analysis of algorithms that emphasizes on both the underlying mathematical theory and practical considerations of efficiency. By learning a range of algorithm design techniques

as Brute Force, Divide & Conquer, Decrease & Conquer, Transform and Conquer, Greedy Algorithms and Dynamic Programming, students should be able to develop efficient algorithms for simple computational tasks and reasoning about the correctness of them. Through the complexity measures, different range of behaviors of algorithms and the notion of tractable and intractable problems will be discussed.

### **MIT 5313 Advanced Data Communications and Network**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Evaluate the theory of data communications related to the network models in current technologies.
- CLO2: Manipulate the implementation in managing network infrastructure and services with the emerging trends and technologies.
- CLO3: Relate the present research in data communications and networking in order to apply in the real environment based on the concept.

#### Synopsis:

This course introduces the fundamental concepts and terminology of data communication and networking, encompassing both technical and managerial aspects and to help students better understand the challenges and opportunities faced by modern business. Topics will include fundamentals of telecommunications, data transmission mechanisms, telecommunication media and technologies, considerations for LAN and WAN implementations, the Internet and intranet applications, emerging telecommunications technologies, and trends in the telecommunications industry. Students will also be able to understand, explain and ap-

ply the fundamentals of data communication and network technology concepts and skills in network applications, troubleshooting, and configuring the computer networks using guided or unguided media.

### MITP 5364 Big Data Analytics

#### Learning Outcomes:

At the end of the course, students should be able to:

CLO1: Distinguish the eco system for big data.

CLO2: Demonstrate the performance of various data analytics techniques.

CLO3: Implement star schemas and data mining techniques.

#### Synopsis:

This course not only explores the fundamentals of big data, but also the ecosystem, challenges and applications of big data. Students are exposed to the framework (Hadoop), distributed data processing programming (MapReduce), programming languages/tools (e.g. R, Python) and NoSQL storage solution (e.g. Cassandra, MongoDB) and data analytics techniques (e.g. association rules, classification, clustering and text analysis).

5. Benjamin Bengfort & Jenny Kim, Data Analytics with Hadoop: An Introduction for Data Scientists, O'Reilly, 2016.

**MITP 5523 Database Administration and Security****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Examine the concepts, techniques, and issues in the administration and security of the database systems, environments, and applications.
- CLO2: Demonstrate the ability to apply appropriate technical and investigative techniques in solving problems related to database administration and security using recent technologies and solutions.
- CLO3: Propose the application of efficient administration and security methods in databases and other areas such as network and the internet.

**Synopsis:**

This course covers the concepts, techniques, and issues in the administration and security of database systems, environments, and applications. Students will gain knowledge on the current database administration and security techniques and practices. They will also explore how to manage various structures in the database and conduct performance monitoring, user management as well as backup and recovery techniques. As for database security, students will learn how to secure the database from

potential attacks and threats. Topics include data availability, integrity, and security, security architecture, database application security models, virtual private databases, and database auditing. In this course, students will also exercise information seeking about issues and recent technologies in database administration and data security.

5. Kosseff, J., Cybersecurity Law, Wiley, 2019.

**MITP 5353 Spatial Databases****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Identify the trend of different topics in spatial data via independent study and research.

CLO2: Develop skills of using Spatial Analysis for solving practical problems.

CLO3: Apply the knowledge in current trend of spatial data projects.

#### Synopsis:

The aim of the subject is to facilitate students' critical appreciation of current developments and concerns in spatial database and its use in business, environmental and resources managements, prediction future scenario. Students will evaluate the impact of the current developments and issues for their own work roles. The content will be a negotiated set of topics based on current developments in spatial database and spatial information development. The course also give students experience in critical reading and analyzing journal literature's.

#### **MITP 5563 Advanced Database System Principles**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Explain advanced data modeling concepts, query processing and issues in designing, developing and managing database systems.
- CLO2: Construct advanced data model and queries based on user requirements of a database system.
- CLO3: Identify various issues in managing database systems such as security, data quality and ethics.

#### Synopsis:

Understanding how to analyze and model the data in the organization is fundamental to the management of databases. This course will have advanced topics component that aim at knowledge regarding the implementation of database management systems as well as insights into the development and administration of database systems in various environments. This course explores key aspects of database system analysis, design and implementation, focusing on various topics from advanced concepts in mod-

eling, query processing, performance tuning, transaction management and other current issues.

### **MITP 5553 Data Warehousing and Data Mining**

#### Learning Outcomes:

At the end of the course, students should be able to:

CLO1: Design data warehouses based on the data warehousing model and lifecycle.

CLO2: Demonstrate the performance of data warehousing and data mining techniques.

CLO3: Implement star schemas and data mining techniques.

#### Synopsis:

This subject focuses on two parts: data warehousing and data mining. The data warehousing portion covers the fundamentals of data warehousing, multidimensional data analysis and factors involved in the analysis, planning, design, loading, maintenance and exploitation of successful data warehouse. The data mining portion covers the fundamentals of data mining, techniques, algorithms, tools and topics in knowledge discovery.

### **MITP 5343 Data Integration**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Design data integration strategy using string, schema and data matching.
- CLO2: Examine query processing requirements for data integration.
- CLO3: Prepare data integration implementation report.

#### **Synopsis:**

Data integration problems arise whenever data from separate sources need to be combined as the basis for new applications. The availability of integrated data from multiple independent, heterogeneous data sources is crucial for many applications. The course introduces the fundamental of data integration, where issues arising in data integration, the theoretical foundations of the area, and algorithms and software systems that facilitating integration will be covered.

### **MITP 5253 Software Quality**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Explain software quality assurance, standards, metrics and measurements.
- CLO2: Integrate the current scenario or issues related to software quality topics.
- CLO3: Practice software quality assurance plan which include organization, procedure, documentation, standard model measurement and metrics.

#### **Synopsis:**

The course discuss on quality term as a multifaced concept which can be described from many perspectives. Then this quality issues

is extended into software context where assuring software quality is critical in software development. Therefore an organization requires planned quality assurance to ensure quality embedded into the software. Software metrics are tools of measurement attributes of a system, component or process possess a given attribute are essential in software engineering. The use of process standards in the entire software development and product standards are also integral part of assuring quality.

## MSMD 5213 Agile Project Management

### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Apply the concept of agile project management for any IT projects.
- CLO2: Work on the principles and practices of agile project management in the IT projects.
- CLO3: Follow the standard guideline to produce a project vision and the product roadmap in a collaborative team environment for the purpose of IT project completion.

### Synopsis:

This subject introduces the basic concept of agile project management to the student. It covers the agile project management process which includes agile tools and techniques for today knowledge-based projects. A knowledge-based project requires the project manager to manage, optimize and facilitate knowledge as a resource throughout the duration. This subject also covers support areas such as risk management. This subject exposes the student to the transition of a traditional project management into an agile project management.

**MASTER OF COMPUTER SCIENCE  
(INTERNETWORKING TECHNOLOGY)**

## MASTER OF COMPUTER SCIENCE (INTERNETWORKING TECHNOLOGY)

This programme is specifically designed to equip students with the latest technical knowledge and advanced technology in internetworking that can meet industry needs.

### Programme Educational Objectives (PEO)

Programme Educational Objectives (PEO) are specific goals describing the expected achievement of graduates in their career and professional life after 5 years of graduation.

Below are the PEO for this programme:

- PEO1:** Practice in-depth knowledge and skills of Computer Science with specialization in Internetworking Technology field.
- PEO2:** Demonstrate effective leadership and communication to a wide variety of audiences or multi-disciplinary teams, tolerate and value different global perspectives and cultures towards lifelong learning.
- PEO3:** Demonstrate knowledge of current issues in technology through learning and research activities using scientific methods.
- PEO4:** Practice professional, ethical and societal responsibilities, and show adaptability in different roles and surroundings in contributing to the community and business.

## Programme Outcomes (PO)

Programme Outcomes (PO) are statements describing what students are expected to know and be able to perform or attain by the time of graduation. These are related to the Knowledge (K), Skills (S), and Attitude (A) that students acquire throughout the programme.

Below is the list of PO for this programme:

- PO1:** Demonstrate originality and independence in undertaking analytical and critical evaluation, and synthesis of complex information, specialized concepts, theories, methods and practice in Computer Science;
- PO2:** Apply knowledge critically and collectively to manage and resolve complex problems or issues in field of internetworking technology;
- PO3:** Apply the practical skill in working environment related to internetworking technology field;
- PO4:** Communicate effectively the knowledge, skills, ideas, critique and rationale in both written and verbal forms using appropriate methods to peers, experts, and non-experts;
- PO5:** Competently use a wide range of suitable digital technologies and quantitative mechanisms to design and plan evaluation activities for enhancing study, research and practice;
- PO6:** Demonstrate significant autonomy, independence and leadership skills at work and class with self-advancement through continuous academic or professional development; and
- PO7:** Initiate or lead entrepreneurial projects and adhere to legal, ethical, professional and sustainable practices.

Programme Structure - Full Time**September Intake:**

<b>Semester 1 (September)</b>		
<b>Course Code</b>	<b>Course</b>	<b>Credit</b>
MPSW 5013	Research Methodology	3
MPSW XXXX	University Course	3
MITP 5113	Algorithm Analysis and Design	3

## Course Details

### **MPSW 5013 Research Methodology:**

#### Learning Outcomes:

At the end of the course, students should be able to:

CLO1: Apply ethical research skills in constructing research questions, objectives and hypothesis (if any) relevant to the research problem.

CLO2: Synthesize relevant literature to address the knowledge gaps.

CLO3: Develop research proposal with an improvement of existing knowledge.

#### Synopsis:

The primary goal of this course is to provide students with the necessary knowledge and skills in preparing for their Master dissertation. In this course, students will be exposed to the important concepts of conducting scientific research and managing ethical research. The course is designed to introduce students to the principles and good practices of conducting research. Activities at each step of the research process will be elaborated in order to develop the skills and competencies required to facilitate a successful research project at postgraduate level. At the end of the course, students are expected to submit a research proposal relevant to their field of study.

## MPSW 5063 Entrepreneurship

### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Analyse entrepreneurial skills in identifying and exploiting entrepreneurial opportunities.
- CLO2: Apply commercially viable ideas, projects, products prototypes for commercialization within the context of societal framework and to deliver business model canvassing and business value proposition.
- CLO3: Develop creative and viable high tech business models and strategies.

### Synopsis:

The objectives of this course are to provide students a robust foundation in theories relevant to the improvement of entrepreneurial behaviour and capabilities in the context of technology ventures and to stimulate them to think and behave like an entrepreneur. First, the course covers fundamental issues such as the influence of risk and uncertainty, the role of technology in entrepreneurship, opportunity recognition, business model creation, life cycle and key stages of the entrepreneurial business and the development of an operational and financial foundation of a technology venture. Second, the course provides students with actionable knowledge by familiarising them

with the areas of entrepreneurial expertise necessary in order to found and/or grow a technology venture.

**MPSW 5073 Project Management****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyze the core concepts and principles, functions, and process in project management.
- CLO2: Develop a comprehensive & viable project proposal.
- CLO3: Evaluate best practices and methodology in project management.

**Synopsis:**

This subject focuses on the principles of project management based on Project Management Body of Knowledge (PMBOK). Students will be familiarized with the Project Management process group functions (initiating, planning, executing, controlling and closing) and project knowledge areas (integration, scope, time, cost, quality and human resources). Various tools for supporting the analysis of works in project management will be introduced. Topics including initiating and planning the project, working with the management, project appraisal & sensitivity, work breakdown structure, managing uncertainty, building project plan, implementing and revising project plan, completing the project and contract laws. Microsoft Project (MS Project) will be introduced as project management software tools.

5. Trevor L Young, Successful Project Management, Kogan Page Publishers, 2016.

**MPSW 5033 Engineering Technology Management****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Identify the principles of engineering management and technology management across different industries.
- CLO2: Apply relevant issues in engineering management and technology management across different industries.
- CLO3: Analysis the impact of relevant issues in the context of engineering

management and technology management across different industries.

#### Synopsis:

The course consists of two components, i.e., Engineering Management and Technology Management. Topics in Engineering Management provide a vehicle for engineers and technical specialist to enhance their knowledge on management, organizational structure and behavior of engineering/technical organizations. Additional topics will enhance the knowledge and competencies in the management of engineering activities such as design, operations, and quality. The Technology Management part of the course will equip students with contemporary views and tools on management of technology and its impact on an organization. It emphasizes management of innovation and new product development as well as managing technology and knowledge. The interaction of technology and the law, particularly the knowledge management and intellectual property will be covered.

### **MPSW 5053 Quality Systems Management**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Explain the conceptual understanding of Quality.
- CLO2: Identify Quality System Management information.
- CLO3: Propose Quality System Management techniques and tools in the practice of organizations.

#### Synopsis:

This course presents the fundamental elements of Quality Management System including the importance of quality as a strategy for continuous improvement in business performance. It explains the strategies for

competitive quality in design and manufacture as well as in terms of customer supply chain concept of total quality aspect. Such topics include Management systems ISO, variability, Six Sigma, Taguchi method, failure mode and effect analysis (FMEA) and quality function deployment. Several quality control tools such as Pareto chart, bar chart and scatter diagram will be cover in statistical data collection, measurement and analysis. Finally, concepts of benchmarking and ISO standards with respect to control elements will be integrated with the Total Quality Management (TQM) as part of quality Management system.

### MITU 5213 Project 1

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Formulate the problems, objectives and scope based on complex technology solutions.
- CLO2: Perform literature review and appropriate methodology to complete the project.
- CLO3: Defend the proposed project solutions in written and verbal forms.

#### Synopsis:

This course is the first part of project that requires a student to prepare a master research proposal based on the theories and techniques of technologies learnt previously. Student is required to write three chapters of dissertation i.e. Chapter 1: Introduction, Chapter 2: Literature Review and Chapter 3: Research Methodology. Besides writing the proposal, student needs to present and defend his/her proposal. Student is expected to demonstrate ability to identify and propose solutions to the identified problems.

and Mixed Methods Approaches, 5th Edition, California: SAGE Publications, Incorporated, 2020.

## **MITU 5226 Project 2**

### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Demonstrate solutions to the proposed project.
- CLO2: Verify solutions to understand the strengths, weaknesses and limitations of the project.
- CLO3: Defend the contributions of the project in written and verbal forms.

### **Synopsis:**

This course is the second part of project that show the ability of student in applying the theories and techniques of technologies learnt previously. Student must write the second fold of dissertation which consists of four chapters of dissertation i.e. Chapter 4: Analysis & Design, Chapter 5: Implementation, Chapter 6: Evaluation and Chapter 7: Conclusion & Future Works. These chapters must align with the proposed solution developed as the end product of this project. Student is required to justify the contribution of the proposed solution throughout the presentation sessions.

## **MITP 5113 Algorithm Analysis and Design**

### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Identify algorithm design technique and method of analysis.
- CLO2: Explain algorithms efficiency in terms of the amount of resources, which are time and storage space required to execute the algorithm.
- CLO3: Explain algorithm design technique based on problem type.

### **Synopsis:**

This course introduces the students to the fundamentals principles of design and analysis of algorithms. It covers formal techniques to support the design and analysis of algorithms that emphasizes on both the underlying mathematical theory and practical considerations of efficiency. By learning a range of algorithm design techniques

as Brute Force, Divide & Conquer, Decrease & Conquer, Transform and Conquer, Greedy Algorithms and Dynamic Programming, students should be able to develop efficient algorithms for simple computational tasks and reasoning about the correctness of them. Through the complexity measures, different range of behaviors of algorithms and the notion of tractable and intractable problems will be discussed.

### **MIT 5313 Advanced Data Communications and Network**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Evaluate the theory of data communications related to the network models in current technologies.
- CLO2: Manipulate the implementation in managing network infrastructure and services with the emerging trends and technologies.
- CLO3: Relate the present research in data communications and networking in order to apply in the real environment based on the concept.

#### Synopsis:

This course introduces the fundamental concepts and terminology of data communication and networking, encompassing both technical and managerial aspects and to help students better understand the challenges and opportunities faced by modern business. Topics will include fundamentals of telecommunications, data transmission mechanisms, telecommunication media and technologies, considerations for LAN and WAN implementations, the Internet and intranet applications, emerging telecommunications technologies, and trends in the telecommunications industry. Students will also be able to understand, explain and ap-

ply the fundamentals of data communication and network technology concepts and skills in network applications, troubleshooting, and configuring the computer networks using guided or unguided media.

### **MITS 5354 Internet Security**

#### Learning Outcomes:

At the end of the course, students should be able to:

CLO1: Explain the concept, issues, and trends of internet security.

CLO2: Perform a case study about the current attack trends towards the social, ethical issues, and the related cyber laws.

CLO3: Construct the appropriate security mechanism to defense from the attacks.

#### Synopsis:

This course provides a study of various attack techniques at the network, transport, and application layer. Students also are exposed to the current attacks trend and the related cyber laws and ethical issues. In addition, the basics of cryptography and the applications are also introduced in the topic. This course also covers the defense mechanisms in the three layers; network, transport, and application.

## **MITS 5213 Distributed Computing Systems**

### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Organize the heterogeneous main components architectures in distributed system.
- CLO2: Display knowledge about the design principles of distributed system architecture.
- CLO3: Propose solution on large-scale heterogeneous distributed system performances problem.

### **Synopsis:**

This course is concerned with the principles and implementation of the software necessary to manage system resources, particularly in a distributed environment. A core

knowledge of basic operating systems concepts (virtual memory, I/O, process management and communication) is assumed. The design issues and distributed system concepts are covered such as coverage of large-scale applications, fault modelling and fault tolerance, models of system execution, and technology related to distributed systems.

### **MITS 5523 Advanced Mobile Computing**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Describe the concept and different technologies of mobile computing.
- CLO2: Relate the advancement in mobile computing with the changes of all aspects of human life.
- CLO3: Propose mobile computing application to solve current issues in certain area.

#### **Synopsis:**

This course introduces to students the fundamental concept of mobile computing and mobile application development. Mobile computing will be discussed from the perspectives of mobile technology, application development, and user interaction. The course wills overview various mobile computing applications, technologies, and wireless communication. This course also introduced the uses of mobile application frameworks and development environments to reinforce concepts covered in lectures. Students will obtain hands-on experiences through mobile computing projects to solve

any aspects of human life such as personal communication, education, business and healthcare. The course will look at some current research in mobile computing and identify potential research problems in this field.

5. Rafael Barrett, Wireless Networks and Mobile Computing, Wilford Press, 2016.

### **MITS 5343 Advanced Network Design And Diagnostics**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Design networks project that meets

a customer's business and technical goals.

CLO2: Identify the processes and tools used in order to understand traffic flow, protocol behavior, and internetworking technologies.

CLO3: Explain the acquired understanding of tools and language during analysis and design of a network structure which can fulfill the customer requirement in terms of network performance, security, capacity, and weight.

#### Synopsis:

This course covers a top-down approach to network design, the concept, guidelines, practice, and diagnostics for requirement analysis and flows analysis. The technology choices, interconnection mechanism and network management, and security will be covered in logical design. Some issues on network design will be included in physical design and addressing and routing.

6. Oppenheimer, P., Top Down Network Design, 3rd Edition, Cisco Press, 2010.

#### **MIT5 5373 Network and Internet Programming**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Demonstrate an understanding of the usage of the application programming interfaces for each of the different network protocols with emphasis on the application and transport layers.
- CLO2: Form an integrated solution for Internet application problems using suitable network programming interfaces.
- CLO3: Formulate and integrate appropriate network programming interfaces to solve Internet application problems in a small group environment.

### Synopsis:

This course reviews concepts, techniques, and systems issues in advanced Internet application development, and explores new challenges and research issues that are critical for developing network and Internet applications, such as network monitoring, web servers, and web services. One of the important goals of the course is to look beyond the present status of the Internet and conjecture what possible future technologies and applications will evolve. The course will include a significant project component that will typically require programming skills.

### **MITS 5323 Advanced Scalable Internetworking**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Explain in detail the network requirement and current trend technology for building the advanced scalable network.
- CLO2: Design the advanced scalable network by integration remote access and reliable routing protocol.
- CLO3: Demonstrate routing protocol operation, configurations, troubleshooting and network monitoring activities.

#### Synopsis:

This subject emphasizes the theory of building advanced scalable network. It also involves the use of internetworking architecture and network equipment. The theory and technique on routing protocol and remote access technologies will be emphasized to build a scalable internetwork. The hands-on covers the configuration of routing protocol and network monitoring tools. In addition, it exposes WAN technologies including VPN, Frame Relay, Software Defined Network (SDN).

**MIT 5333 Advanced High Performance Networks**

## Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Evaluate high performance networks with guaranteed QoS, particularly in a saturated/congested networks.
- CLO2: Identify the main techniques and mechanism of queue management that provide high quality of service (QoS).
- CLO3: Propose solutions to the problems in poorly designed network by utilizing efficient queuing algorithm and efficient traffic control scheme.

## Synopsis:

This course is an in-depth study of the theory, design and performance analysis of high-performance networks. Topics include specific high-performance network implementations and emerging technologies, including multimedia transmission, routing protocols, traffic control management, quality of service (QoS), and next generation networks. Performance analysis of networks will include simulation of basic queuing models.

### **MITS 5363 Internet Governance**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Elaborate the concepts, architecture and application of the related Internet Governance models and technologies.
- CLO2: Integrate knowledge concerning current issues, impact to society and open issues in Internet Governance.
- CLO3: Identify the key elements, factors, benefit, risks and ethics that drive the successful adoption of Internet Governance and Security in a business case.

#### **Synopsis:**

This course focuses on the technical, security, legal, economic, development, socio-cultural, and human rights aspects of Internet governance. Providing a brief introduction, a summary of major questions and debates, and a survey of different views and approaches for each issue related and offers a practical framework for analysis and discussion of Internet governance and security.

### **MITS 5383 Emerging Internetworking Technology**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Elaborate on the concept, architecture, and application of the related emerging technologies.
- CLO2: Perform literature study on the current trends, impact to society, and open issues of the related emerging technologies.
- CLO3: Identify the key attributes, factors, benefits, and risks that drive the successful adoption of emerging technologies in a business case.

#### **Synopsis:**

This course will provide state-of-art of emerging technologies in internetworking

which covers topics in three main areas: smart networking technologies and application, large-scale distributed system, and next-generation wireless communication. For each topic, students will be introduced to the platform, system architecture, and principle designs. In addition, existing barriers, challenges, and opportunities of emerging internetworking technology are presented.

# **MASTER OF COMPUTER SCIENCE (SECURITY SCIENCE)**

## **MASTER OF COMPUTER SCIENCE (SECURITY SCIENCE)**

This programme is specifically designed to equip students with security elements in information and communication technology related to management, data and infrastructure.

### **Programme Educational Objectives (PEO)**

Programme Educational Objectives (PEO) are specific goals describing the expected achievement of graduates in their career and professional life after 5 years of graduation.

Below are the PEO for this programme:

- PEO1:** Practice in-depth knowledge and skills of Computer Science with specialization in Security Science field.
- PEO2:** Demonstrate effective leadership and communication to a wide variety of audiences or multi-disciplinary teams, tolerate and value different global perspectives and cultures towards lifelong learning.
- PEO3:** Demonstrate knowledge of current issues in technology through learning and research activities using scientific methods.
- PEO4:** Practice professional, ethical and societal responsibilities, and show adaptability in different roles and surroundings in contributing to the community and business.

## Programme Outcomes (PO)

Programme Outcomes (PO) are statements describing what students are expected to know and be able to perform or attain by the time of graduation. These are related to the Knowledge (K), Skills (S), and Attitude (A) that students acquire throughout the programme.

Below is the list of PO for this programme:

- PO1:** Demonstrate originality and independence in undertaking analytical and critical evaluation, and synthesis of complex information, specialized concepts, theories, methods and practice in Computer Science;
- PO2:** Apply knowledge critically and collectively to manage and resolve complex problems or issues in field of security science;
- PO3:** Apply the practical skill in working environment related to security science field;
- PO4:** Communicate effectively the knowledge, skills, ideas, critique and rationale in both written and verbal forms using appropriate methods to peers, experts, and non-experts;
- PO5:** Competently use a wide range of suitable digital technologies and quantitative mechanisms to design and plan evaluation activities for enhancing study, research and practice;
- PO6:** Demonstrate significant autonomy, independence and leadership skills at work and class with self-advancement through continuous academic or professional development; and
- PO7:** Initiate or lead entrepreneurial projects and adhere to legal, ethical, professional and sustainable practices.

Programme Structure - Full Time**September Intake:**

## Course Details

### **MPSW 5013 Research Methodology:**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Apply ethical research skills in constructing research questions, objectives and hypothesis (if any) relevant to the research problem.
- CLO2: Synthesize relevant literature to address the knowledge gaps.
- CLO3: Develop research proposal with an improvement of existing knowledge.

#### Synopsis:

The primary goal of this course is to provide students with the necessary knowledge and skills in preparing for their Master dissertation. In this course, students will be exposed to the important concepts of conducting scientific research and managing ethical research. The course is designed to introduce students to the principles and good practices of conducting research. Activities at each step of the research process will be elaborated in order to develop the skills and competencies required to facilitate a successful research project at postgraduate level. At the end of the course, students are expected to submit a research proposal relevant to their field of study.

## MPSW 5063 Entrepreneurship

### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Analyse entrepreneurial skills in identifying and exploiting entrepreneurial opportunities.
- CLO2: Apply commercially viable ideas, projects, products prototypes for commercialization within the context of societal framework and to deliver business model canvassing and business value proposition.
- CLO3: Develop creative and viable high tech business models and strategies.

### Synopsis:

The objectives of this course are to provide students a robust foundation in theories relevant to the improvement of entrepreneurial behaviour and capabilities in the context of technology ventures and to stimulate them to think and behave like an entrepreneur. First, the course covers fundamental issues such as the influence of risk and uncertainty, the role of technology in entrepreneurship, opportunity recognition, business model creation, life cycle and key stages of the entrepreneurial business and the development of an operational and financial foundation of a technology venture. Second, the course provides students with actionable knowledge by familiarising them

with the areas of entrepreneurial expertise necessary in order to found and/or grow a technology venture.

**MPSW 5073 Project Management****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyze the core concepts and principles, functions, and process in project management.
- CLO2: Develop a comprehensive & viable project proposal.
- CLO3: Evaluate best practices and methodology in project management.

**Synopsis:**

This subject focuses on the principles of project management based on Project Management Body of Knowledge (PMBOK). Students will be familiarized with the Project Management process group functions (initiating, planning, executing, controlling and closing) and project knowledge areas (integration, scope, time, cost, quality and human resources). Various tools for supporting the analysis of works in project management will be introduced. Topics including initiating and planning the project, working with the management, project appraisal & sensitivity, work breakdown structure, managing uncertainty, building project plan, implementing and revising project plan, completing the project and contract laws. Microsoft Project (MS Project) will be introduced as project management software tools.

5. Trevor L Young, Successful Project Management, Kogan Page Publishers, 2016.

**MPSW 5033 Engineering Technology Management****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Identify the principles of engineering management and technology management across different industries.
- CLO2: Apply relevant issues in engineering management and technology management across different industries.
- CLO3: Analysis the impact of relevant issues in the context of engineering

management and technology management across different industries.

### Synopsis:

The course consists of two components, i.e., Engineering Management and Technology Management. Topics in Engineering Management provide a vehicle for engineers and technical specialist to enhance their knowledge on management, organizational structure and behavior of engineering/technical organizations. Additional topics will enhance the knowledge and competencies in the management of engineering activities such as design, operations, and quality. The Technology Management part of the course will equip students with contemporary views and tools on management of technology and its impact on an organization. It emphasizes management of innovation and new product development as well as managing technology and knowledge. The interaction of technology and the law, particularly the knowledge management and intellectual property will be covered.

## **MPSW 5053 Quality Systems Management**

### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Explain the conceptual understanding of Quality.
- CLO2: Identify Quality System Management information.
- CLO3: Propose Quality System Management techniques and tools in the practice of organizations.

### Synopsis:

This course presents the fundamental elements of Quality Management System including the importance of quality as a strategy for continuous improvement in business performance. It explains the strategies for

competitive quality in design and manufacture as well as in terms of customer supply chain concept of total quality aspect. Such topics include Management systems ISO, variability, Six Sigma, Taguchi method, failure mode and effect analysis (FMEA) and quality function deployment. Several quality control tools such as Pareto chart, bar chart and scatter diagram will be cover in statistical data collection, measurement and analysis. Finally, concepts of benchmarking and ISO standards with respect to control elements will be integrated with the Total Quality Management (TQM) as part of quality Management system.

### MITU 5213 Project 1

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Formulate the problems, objectives and scope based on complex technology solutions.
- CLO2: Perform literature review and appropriate methodology to complete the project.
- CLO3: Defend the proposed project solutions in written and verbal forms.

#### Synopsis:

This course is the first part of project that requires a student to prepare a master research proposal based on the theories and techniques of technologies learnt previously. Student is required to write three chapters of dissertation i.e. Chapter 1: Introduction, Chapter 2: Literature Review and Chapter 3: Research Methodology. Besides writing the proposal, student needs to present and defend his/her proposal. Student is expected to demonstrate ability to identify and propose solutions to the identified problems.

#### References:

2. Cresswell, J. W., and Creswell, J.D., Research Design: Qualitative, Quantitative,

and Mixed Methods Approaches, 5th Edition, California: SAGE Publications, Incorporated, 2020.

## MITU 5226 Project 2

### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Demonstrate solutions to the proposed project.
- CLO2: Verify solutions to understand the strengths, weaknesses and limitations of the project.
- CLO3: Defend the contributions of the project in written and verbal forms.

### Synopsis:

This course is the second part of project that show the ability of student in applying the theories and techniques of technologies learnt previously. Student must write the second fold of dissertation which consists of four chapters of dissertation i.e. Chapter 4: Analysis & Design, Chapter 5: Implementation, Chapter 6: Evaluation and Chapter 7: Conclusion & Future Works. These chapters must align with the proposed solution developed as the end product of this project. Student is required to justify the contribution of the proposed solution throughout the presentation sessions.

## MITP 5113 Algorithm Analysis and Design

### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Identify algorithm design technique and method of analysis.
- CLO2: Explain algorithms efficiency in terms of the amount of resources, which are time and storage space required to execute the algorithm.
- CLO3: Explain algorithm design technique based on problem type.

### Synopsis:

This course introduces the students to the fundamentals principles of design and analysis of algorithms. It covers formal techniques to support the design and analysis of algorithms that emphasizes on both the underlying mathematical theory and practical considerations of efficiency. By learning a range of algorithm design techniques

as Brute Force, Divide & Conquer, Decrease & Conquer, Transform and Conquer, Greedy Algorithms and Dynamic Programming, students should be able to develop efficient algorithms for simple computational tasks and reasoning about the correctness of them. Through the complexity measures, different range of behaviors of algorithms and the notion of tractable and intractable problems will be discussed.

### **MIT5 5313 Advanced Data Communications and Network**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Evaluate the theory of data communications related to the network models in current technologies.
- CLO2: Manipulate the implementation in managing network infrastructure and services with the emerging trends and technologies.
- CLO3: Relate the present research in data communications and networking in order to apply in the real environment based on the concept.

#### Synopsis:

This course introduces the fundamental concepts and terminology of data communication and networking, encompassing both technical and managerial aspects and to help students better understand the challenges and opportunities faced by modern business. Topics will include fundamentals of telecommunications, data transmission mechanisms, telecommunication media and technologies, considerations for LAN and WAN implementations, the Internet and intranet applications, emerging telecommunications technologies, and trends in the telecommunications industry. Students will also be able to understand, explain and ap-

ply the fundamentals of data communication and network technology concepts and skills in network applications, troubleshooting, and configuring the computer networks using guided or unguided media.

### **MITS 5443 Cryptography and Data Security**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Explain the concept and components of cryptography.
- CLO2: Relate the basic theory and practice of secure systems, and the types of security services needed for computer and network security.
- CLO3: Demonstrate some aspect of cryptography in depth.

#### Synopsis:

This course explore the methods, algorithms, techniques, and tools of cryptography and data security. After studying the theoretical aspects of cryptographic algorithms and protocols, we show how these techniques can be integrated to solve particular data and communication security problems. This course material is of use to computer and communication engineers who are interested in embedding security into an information system, and thus, providing confidentiality, integrity and authenticity of the documents and the communicating parties.

### **MITS 5433 Systems and Network Ethical Hacking**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Explain the fundamentals steps that a hacker performs, and common tools hackers use in conducting attacks.
- CLO2: Demonstrate exploitation on system and network vulnerability as proof of concept by using appropriate hacking tools.
- CLO3: Formulate the tools and methods of protecting systems and networks against hacker attacks.

#### **Synopsis:**

In this course, students will study and gain experience with the role of defending hosts and networks from attack as well as learning how the hacker uses tools to attack and

penetrate networks. Students will be able to use several open software tools that will analyze host and networks for vulnerabilities and be exposed to the hacking methodology. It will immerse the student into an interactive environment where they will be shown how to scan, test, hack and secure their own systems. The lab intensive environment gives each student in-depth knowledge and practical experience with the current essential security systems. Students will begin by understanding how perimeter defenses work and then be lead into scanning and attacking their own networks in a simulation environment. Students then learn how intruders escalate privileges and what steps can be taken to secure a system from hacking threat.

### **MITS 5463 Security Management Practices**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Assess risks in information security and implement protection and control efforts.
- CLO2: Organize an information security program.
- CLO3: Design the requirement of regulatory, standards and best practices and apply them in the working environment.

#### **Synopsis:**

This course covers the principles of information security management and techniques to formulate, plan, manage, implement and maintain information security strategies, policies and procedures. The course focuses on two main disciplines of information

security management; first is strategic which covers theoretical view of information security management issues that range from national to international levels, and second is on organizational security management. In the latter, students are taught on issues and challenges surrounding the implementation of best security practices, process and the application of well-known information security standards as practiced by the industry.

**MITIS 5484 Cyber Threat Intelligence****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Explain the concept of intelligence detection againsts cyberthreat.
- CLO2: Relate relevant approach in cyberthreat detection challenges.
- CLO3: Identify suitable approach in detecting cyberthreat collaboratively.

**Synopsis:**

This course covers the concept and applications of intelligence techniques to various problem domains in security and abuse. The course will explore methods for detecting, evaluating the suitability of different machine learning techniques in different scenarios, and focus on guiding principles that will help achieve better security. This course also discusses threats to modern computer and network systems on how intelligence detection applies to the aforementioned threats.

**MITIS 5413 Public Key Infrastructure****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Explain the issues related to the successful deployment of digital certificates to meet business and security requirements.
- CLO2: Elaborate an insight and strategy into an effective use of PKI in the context of working policies that govern the use, administration, and management of certificates, and design the digital certificate according to the standard format.
- CLO3: Demonstrate how PKI establishes digital trust and maintains that level of assurance built through a complex web of social, legal, national, international, and business interactions, and the future trend of PKI.

#### Synopsis:

This subject highlighted the principles of Public Key Infrastructure, Digital Signature Law and the related Cyber Laws. The course will not only cover public key algorithms in electronic communications but also the certificate authority and related arrangements as well as. This course aims to give a broader view to the Electronic Commerce transaction to the students.

### **MITS 5423 Computer Forensics**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Explain the emerging field of computer forensics in obtaining and analyzing the evidence from computers.
- CLO2: Prepare the investigation procedures for investigating the computer crime.
- CLO3: Demonstrate the use of forensic tools to complete the investigating process

#### Synopsis:

This subject introduces the fundamentals of computer forensic technology. Emphasis will be placed on identifying the threats to,

and vulnerabilities of, computer systems and how to minimize them. The subject also focuses on identifying the victims, executing the attack, and determining various methods that used to gain access to computer systems. The theory and technique on identifying the legal and ethical issues that are involved in computer forensics and methods on investigating the crime are also explored. The hands-on covers the process of investigating the computer crime using computer forensics tools.

### **MIT 5453 Intrusion Detection and Prevention**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Explain the various types of intrusions and attacks on a network.
- CLO2: Organize the mechanism or tools which can be used to detect and prevent the intrusions by integration of technique and technology of security management.
- CLO3: Demonstrate intrusion detection system for preventing the illegal intrusion.

#### Synopsis:

This subject highlights the concepts of computer security in term of intrusion detection and prevention. The scope of detection mainly involves the network-based and host-based approaches. Several techniques as well as technology emphasized to form a secure network environment. In addition, the current trends with the application of machine learning and deep learning also will be focused. The hands-on covers the configuration of intrusion detection system using detection tools.

**MITS 5473 Watermarking**

## Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Manipulate the concept, theory, method and practice in Digital Watermarking for analysis and evaluation.
- CLO2: Use the knowledge needed to resolve problems in digital watermarking based on techniques.
- CLO3: Demonstrate practical skills of development using current and latest tools for intellectual property management and protection of multimedia.

## Synopsis:

The subject explores the mechanism for protecting audio, video, image and data. It covers about knowledge and application on protecting the multimedia content and distributing multimedia products over the Internet. The theory and technique on identifying the legal and technical issues that are involved in digital watermarking is studied. Methods on the mechanism of current and latest application tools for protecting the intellectual property management and protection of multimedia are also explored.

### **MITS 5223 Secure Software Design and Development**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Explain concepts related to the core software security requirements and foundational design principles.
- CLO2: Propose a secured software requirement in developing secure application.
- CLO3: Formulate a software using secure coding principles that can effectively protect it from vulnerabilities.

#### **Synopsis:**

Development of high-assurance software systems is a growing challenge in emerging complex systems. Secure by design is emerging as a basic principle for trustworthy computing and as a preferred way to ensure the security of networked information systems and infrastructures. This course covers the principles of security software lifecycle for increasing software trustworthiness. In addition, emphasizes on security during planning, designing, developing, acquiring, testing, deploying, maintaining, and/or managing software.

**MIT5 5493 Security Audit and Assessment****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyze the concepts of computer audit and risk management.
- CLO2: Perform an audit process in the computerized environment.
- CLO3: Propose the appropriate response in conformity with security issues in computer security audit.

**Synopsis:**

This course focuses on the concept of computer security and risk management. In addition, emphasizes has given to the importance of computer audit and risk management. The enclosed topics are mainly related to security audit analysis, security monitoring, environmental security and follow up auditing in security concern. The student will be exposed to the field of risk and incident response, recovery and disaster recovery.

**MASTER OF COMPUTER SCIENCE  
(MULTIMEDIA COMPUTING)**

## MASTER OF COMPUTER SCIENCE (MULTIMEDIA COMPUTING)

This programme is specifically designed to equip students with security elements in information and communication technology related to management, data and infrastructure.

### Programme Educational Objectives (PEO)

This program is specifically designed to equip students with the use of the latest technologies to design and develop high-level multimedia based applications that meet industry needs.

Below are the PEO for this programme:

- PEO1:** Practice in-depth and specialist knowledge and skills of Computer Science in Multimedia Computing to support organizational goals.
- PEO2:** Demonstrate higher-order thinking skills and sustained learning in adapting to a constantly changing field through professional development, research and life-long learning.
- PEO3:** Demonstrate effective leadership and communication to a wide variety of audiences or multi-disciplinary teams, tolerate and value different global perspectives and cultures.
- PEO4:** Practice professional, ethical and societal responsibilities, and show adaptability in different roles and surroundings in contributing to the community.

## Programme Outcomes (PO)

Programme Outcomes (PO) are statements describing what students are expected to know and be able to perform or attain by the time of graduation. These are related to the Knowledge (K), Skills (S), and Attitude (A) that students acquire throughout the programme.

Below is the list of PO for this programme:

- PO1:** Have in-depth skills and strong mastery knowledge in Computer Science (Multimedia Computing);
- PO2:** Gain a substantial knowledge of entrepreneurship in Information and Communication Technology area;
- PO3:** Ability to consistently explore and expand contemporary knowledge in targeted discipline (Multimedia Computing);
- PO4:** Ability to gain employment for career development in related Computer Science field (Multimedia Computing);
- PO5:** Demonstrate the ability to identify, analyze and implement efficient solutions to problems with effective communication;
- PO6:** Ability to apply expertise in working environment; and
- PO7:** Demonstrate the ability to lead, manage and coordinate effectively and ethically as an individual or a team player.

Programme Structure - Full Time**September Intake:**

<b>Semester 1 (September)</b>		
<b>Course Code</b>	<b>Course</b>	<b>Credit</b>

## Course Details

### **MPSW 5013 Research Methodology:**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Apply ethical research skills in constructing research questions, objectives and hypothesis (if any) relevant to the research problem.
- CLO2: Synthesize relevant literature to address the knowledge gaps.
- CLO3: Develop research proposal with an improvement of existing knowledge.

#### Synopsis:

The primary goal of this course is to provide students with the necessary knowledge and skills in preparing for their Master dissertation. In this course, students will be exposed to the important concepts of conducting scientific research and managing ethical research. The course is designed to introduce students to the principles and good practices of conducting research. Activities at each step of the research process will be elaborated in order to develop the skills and competencies required to facilitate a successful research project at postgraduate level. At the end of the course, students are expected to submit a research proposal relevant to their field of study.

**MPSW 5063 Entrepreneurship****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyse entrepreneurial skills in identifying and exploiting entrepreneurial opportunities.
- CLO2: Apply commercially viable ideas, projects, products prototypes for commercialization within the context of societal framework and to deliver business model canvassing and business value proposition.
- CLO3: Develop creative and viable high tech business models and strategies.

**Synopsis:**

The objectives of this course are to provide students a robust foundation in theories relevant to the improvement of entrepreneurial behaviour and capabilities in the context of technology ventures and to stimulate them to think and behave like an entrepreneur. First, the course covers fundamental issues such as the influence of risk and uncertainty, the role of technology in entrepreneurship, opportunity recognition, business model creation, life cycle and key stages of the entrepreneurial business and the development of an operational and financial foundation of a technology venture. Second, the course provides students with actionable knowledge by familiarising them

with the areas of entrepreneurial expertise necessary in order to found and/or grow a technology venture.

**MPSW 5073 Project Management****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyze the core concepts and principles, functions, and process in project management.
- CLO2: Develop a comprehensive & viable project proposal.
- CLO3: Evaluate best practices and methodology in project management.

**Synopsis:**

This subject focuses on the principles of project management based on Project Management Body of Knowledge (PMBOK). Students will be familiarized with the Project Management process group functions (initiating, planning, executing, controlling and closing) and project knowledge areas (integration, scope, time, cost, quality and human resources). Various tools for supporting the analysis of works in project management will be introduced. Topics including initiating and planning the project, working with the management, project appraisal & sensitivity, work breakdown structure, managing uncertainty, building project plan, implementing and revising project plan, completing the project and contract laws. Microsoft Project (MS Project) will be introduced as project management software tools.

5. Trevor L Young, Successful Project Management, Kogan Page Publishers, 2016.

**MPSW 5033 Engineering Technology Management****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Identify the principles of engineering management and technology management across different industries.
- CLO2: Apply relevant issues in engineering management and technology management across different industries.
- CLO3: Analysis the impact of relevant issues in the context of engineering management and technology management across different industries.

**Synopsis:**

The course consists of two components, i.e., Engineering Management and Technology Management. Topics in Engineering Management provide a vehicle for engineers and technical specialist to enhance their knowledge on management, organizational structure and behavior of engineering/technical organizations. Additional topics will enhance the knowledge and competencies in the management of engineering activities such as design, operations, and quality. The Technology Management part of the course will equip students with contemporary views and tools on management of technology and its impact on an organization. It emphasizes management of innovation and new product development as well as managing technology and knowledge. The interaction of technology and the law, particularly the knowledge management and intellectual property will be covered.

**MPSW 5053 Quality Systems Management****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Explain the conceptual understanding of Quality.
- CLO2: Identify Quality System Management information.
- CLO3: Propose Quality System Management techniques and tools in the practice of organizations.

**Synopsis:**

This course presents the fundamental elements of Quality Management System including the importance of quality as a strategy for continuous improvement in business performance. It explains the strategies for competitive quality in design and manufacture as well as in terms of customer supply chain concept of total quality aspect. Such topics include Management systems

ISO, variability, Six Sigma, Taguchi method, failure mode and effect analysis (FMEA) and quality function deployment. Several quality control tools such as Pareto chart, bar chart and scatter diagram will be cover in statistical data collection, measurement and analysis. Finally, concepts of benchmarking and ISO standards with respect to control elements will be integrated with the Total Quality Management (TQM) as part of quality Management system.

### MITU 5213 Project 1

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Formulate the problems, objectives and scope based on complex technology solutions.
- CLO2: Perform literature review and appropriate methodology to complete the project.
- CLO3: Defend the proposed project solutions in written and verbal forms.

#### Synopsis:

This course is the first part of project that requires a student to prepare a master research proposal based on the theories and techniques of technologies learnt previously. Student is required to write three chapters of dissertation i.e. Chapter 1: Introduction, Chapter 2: Literature Review and Chapter 3: Research Methodology. Besides writing the proposal, student needs to present and defend his/her proposal. Student is expected to demonstrate ability to identify and propose solutions to the identified problems.

and Mixed Methods Approaches, 5th Edition, California: SAGE Publications, Incorporated, 2020.

## **MITU 5226 Project 2**

### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Demonstrate solutions to the proposed project.
- CLO2: Verify solutions to understand the strengths, weaknesses and limitations of the project.
- CLO3: Defend the contributions of the project in written and verbal forms.

### **Synopsis:**

This course is the second part of project that show the ability of student in applying the theories and techniques of technologies learnt previously. Student must write the second fold of dissertation which consists of four chapters of dissertation i.e. Chapter 4: Analysis & Design, Chapter 5: Implementation, Chapter 6: Evaluation and Chapter 7: Conclusion & Future Works. These chapters must align with the proposed solution developed as the end product of this project. Student is required to justify the contribution of the proposed solution throughout the presentation sessions.

## **MITP 5113 Algorithm Analysis and Design**

### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Identify algorithm design technique and method of analysis.
- CLO2: Explain algorithms efficiency in terms of the amount of resources, which are time and storage space required to execute the algorithm.
- CLO3: Explain algorithm design technique based on problem type.

### **Synopsis:**

This course introduces the students to the fundamentals principles of design and analysis of algorithms. It covers formal techniques to support the design and analysis of algorithms that emphasizes on both the underlying mathematical theory and practical considerations of efficiency. By learning a range of algorithm design techniques

as Brute Force, Divide & Conquer, Decrease & Conquer, Transform and Conquer, Greedy Algorithms and Dynamic Programming, students should be able to develop efficient algorithms for simple computational tasks and reasoning about the correctness of them. Through the complexity measures, different range of behaviors of algorithms and the notion of tractable and intractable problems will be discussed.

### **MIT 5313 Advanced Data Communications and Network**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Evaluate the theory of data communications related to the network models in current technologies.
- CLO2: Manipulate the implementation in managing network infrastructure and services with the emerging trends and technologies.
- CLO3: Relate the present research in data communications and networking in order to apply in the real environment based on the concept.

#### Synopsis:

This course introduces the fundamental concepts and terminology of data communication and networking, encompassing both technical and managerial aspects and to help students better understand the challenges and opportunities faced by modern business. Topics will include fundamentals of telecommunications, data transmission mechanisms, telecommunication media and technologies, considerations for LAN and WAN implementations, the Internet and intranet applications, emerging telecommunications technologies, and trends in the telecommunications industry. Students will also be able to understand, explain and ap-

ply the fundamentals of data communication and network technology concepts and skills in network applications, troubleshooting, and configuring the computer networks using guided or unguided media.

### MITI 5213 Computational Methods

#### Learning Outcomes:

At the end of the course, students should be able to:

CLO1: Construct solution in computational methods through simple modelling.

CLO2: Design a concept of computational methods to support algorithms and computer programs.

CLO3: Formulate computational methods in computer science problems.

#### Synopsis:

This course covers on the topic of computational methods for computer science, which covers the topic on systems of equations and eigenvalues. The course also covers the interpolation, differentiation and integration. Finally, the topic on ordinary differential equations and partial differential equations are introduced as an advanced topic in this course.

### **MITM 5313 Advanced Human Computer Interaction**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Explain how multi-discipline areas in HCI influence the design of interactive applications/systems .
- CLO2: Follow and explain the process of designing and evaluating interactive applications/systems.
- CLO3: Construct a design solution to HCI problems.

#### **Synopsis:**

This course aims to extend the students' basic knowledge of the multi-discipline areas rooted in the HCI body of knowledge. It will equip the students with the current and advanced knowledge of the main issues, theories and methodologies, and how the knowledge should be applied. The topics covered in this course are: cognitive psychology, interaction design methodology, usability evaluation, multisensory and advanced user-interface design, human factors, ergonomics and emerging issues in HCI and interaction

design. The teaching methods consist of lectures, lab activities and guided independent learning for some of the challenging topics.

5. Dov Te'eni, Jane Carey and Ping Zhang, Human Computer Interaction: Developing Effective Organizational Information Systems, John Wiley & Sons, 2007.

### **MIT 5113 Computer Architecture & Compiler**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Explain computer architecture concept including the detailed interactions in computer system and its per-

formance, and how computer architecture is influenced by the needs of compiled program.

CLO2: Revise the compiler structure and relate the impact of compiler structure on programming language design.

CLO3: Apply the knowledge of current trend in computer architecture and compiler design.

#### Synopsis:

This subject covers advanced topics in computer architecture, including multiprocessor and internal memory architecture. It incorporates the latest research and development on topics such as branch prediction, instruction-level parallelism, multithreading, and cache hierarchy design. It also covers the fundamental of compilers design including lexical analysis, various types of parsers, intermediate and object code generation and code optimization. The impact compiler structure on the programming language design will also be examined. The students shall have the knowledge of computer system organization.

### **MITM 5323 Mobile Application Development**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Explain the fundamental technologies of mobile database system and issues in creating, designing and managing the mobile database system.
- CLO2: Illustrate important concept and architecture in mobile database system including Mobile Database Recovery Schemes, Querying Location Dependent Data, and Data Caching and Broadcast.

CLO3: Develop a mobile database application to provide solution to a simple open mobile database problem.

#### Synopsis:

The database field has experienced rapid and incessant growth since the development of centralized relational databases. This course will discuss topics that are of growing importance in both the database research community and industry. Topics covered include conceptual, logical, and physical design of mobile database systems, technologies required for mobile databases, replication requirements for mobile databases, query processing and transaction management in mobile database systems, mobile database security, mobile database recovery schemes, the relationship between mobile database applications and the World Wide Web, communication facilities, data confidentiality and current issues in mobile databases.

### **MITM 5333 Multimedia Based Instructional Design**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Demonstrate a clear understanding of the theories, philosophies, and current research driving the field of Educational Technology, Instructional Design and Web TV.
- CLO2: Discuss and compare a working knowledge of the instructional design process and its application in a media development situation.
- CLO3: Distinguish between the use of instructional technologies to deliver instruction and using instructional technologies to provide meaningful learning.

#### Synopsis:

The purpose of this course is to assist students in learning how to adapt and apply instruction design techniques to multimedia based in both face-to-face (F2F) and distance/online settings. In this subject, students will be introduced to an overview of

the field of Instructional Technology. This course focuses on helping students to develop an awareness and understanding of the theories and philosophies driving the field. In addition, this course will explore common computer-related technologies used within most learning environments. This subject will also explore the variety of interactive instructional techniques possible with computer-based instruction. The student will also learn the concepts and development process of iBook, CD or Web-based multimedia applications and produce products that integrate multimedia applications into effective e-Learning instructions. This subject also covers the principles and techniques used to design and develop content for multimedia production. Specific topics in writing include an introduction to communication, the elements of story creation and correct formats for linear and interactive scripts will be explored. At the end of the semester, the students are required to write and present a concept paper on a proposed multimedia production for a real client.

#### **MITM 5413 Multimedia Professional Ethics**

##### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Develop an in depth understanding of the nature and function of multimedia issues and values especially in Malaysia.
- CLO2: Measure form and content of multimedia issues and values contributing to the development of the MSC.
- CLO3: Interpret application of multimedia issues and values and regulation in current and future multimedia industry.

##### Synopsis:

A general introduction to multimedia issues and values and the statutory, regulatory, industry codes and ethical conventions

operating in Malaysia. Topics covered include: Broadcasting, Content and Audio-Visual Production/Screen Industries, Free Speech and Defamation, Information Equity, Internet and Online Services, Media Ownership, Print Media, Journalism and Media Ethics, Privacy, Spectrum Management, Telecommunications, Universal Service and Regional Communications. General Principles of Intellectual Property will be covered, as well as copyright issues, and relevant entertainment law. The emphasis will be on the harmonization of these issues into the present and future cyber laws in Malaysia, and the relevance and implications of media law in the MSC and Government initiatives, in accordance with the 2020 Vision.

### **MITM 5233 Computer Graphics & Visualization**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Apply computer graphics concepts which are necessary to model problems in different fields such as film special effects, games development, virtual reality, and data visualization.
- CLO2: Present coherent technical and scientific results both orally and in writing and have an understanding of the non-technical aspects to effectively cooperate with other specialists towards the solutions of complex technical problems.
- CLO3: Design and develop software tools to create animation for a real life in certain environment such as architecture and precise engineering.

### Synopsis:

This course assumes a good knowledge of fundamental methods in computer graphics and will start with the basic concepts that underline all graphics applications like computer games, movies, medicine and information visualization. It will provide the student with a sound, broad technical basis in high performance computer graphics in the areas of high quality image generation and interactive graphics. Student will be equipped for projects in specific application areas related to gaming, film special effects, virtual reality and visualization in the final stage of the program. This course will also provide a practical class on advanced computer graphics programming. It will cover major aspects of digital image generation: geometric modelling, computer animation, and rendering. The goal of the course is to provide a strong foundation for computer graphics principles, and provide a hands-on introduction to recent advanced topics, e.g., subdivision surfaces, real-time global illumination, and physically based animation.

### MITM 5223 Advance 3D Animation

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Elaborate and develop advance working animation using key features of modeling, lighting and rendering.
- CLO2: Explain the methods of distributed rendering in scientific research and the animation industry.
- CLO3: Built the relationship between current streams of 3D design and animation research.
- CLO4: Explore distributed rendering on a large-scale project using a specific animation package.

**Synopsis:**

This course concentrates on the principles and common techniques to all animation. Students will get experience in a number of specific animation methods. The course will equip the students with the current and advanced knowledge of the computer animation and rigging techniques, rendering concept, shading and surface characteristics, image resolution and visual effect techniques. They will also learn lighting and rendering techniques, High Dynamic Range Image (HDRI) as well as implement the principle of animations in the projects. The teaching methods consist of lectures, activities and guided independent learning for some of the challenging topics.

**MITM 5113 Advanced Web Programming****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Explain and integrate knowledge of advanced web design techniques and technologies.
- CLO2: Using and apply important components and necessary tools in developing web application.
- CLO3: Develop web applications with back-end databases and PHP.

**Synopsis:**

This advanced hands-on course will teach you to effectively plan, design, program, maintain, administer, and troubleshoot dynamic websites, web servers and web-based database systems using the latest technology including Ajax, JQuery Apache Server and PHP. It emphasis 4 components in developing web applications which are; Client Site Technologies: HTML5, CSS3 and Ajax; Server Site Technologies: JQuery and PHP; Database Server: MySQL; and Web Servers : Apache.

### **MITM 5123 Advanced Audio and Video Technology**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Conceive advance knowledge in digital audio and video technology.
- CLO2: Demonstrate advanced skills in using audio video software for video editing and audio analysis that meets industrial standards.

CLO3: Adapt best practices when developing audio and video application.

#### **Synopsis:**

This course provides students with the knowledge and advanced skills they required to understand and produce a high quality video that meet the industrial standards using fundamental audio video concepts and tools. Students will also be introduced to applied speech and audio processing techniques. The course is also structured to equip students with the foundation to start research work in fields related to audio and video technology.

**MASTER OF TECHNOLOGY  
(DATA SCIENCE & ANALYTICS)**

## MASTER OF TECHNOLOGY (DATA SCIENCE AND ANALYTICS)

The Master of Technology (Data Science and Analytics), for short MTDS, is aimed at recent graduates and industry practitioners from various academic disciplines with strong analytical and computing skills or experiences. The programme is designed to equip students with fundamental and applied knowledge, technical skills, and current technologies in Data Science and Analytics area. These include the fundamental principles of data science, the capability to analyse a diversity of big data, the skills of using data science tools and the capability to apply the data analytics techniques to various domains, as well as the capability to present the analytics results to intended audience. The programme's delivery modes are through lectures, lab sessions, and industrial projects, that emphasize on state-of-the-practice techniques, tools and technology, and recognised methodology through university-industry collaborations.

### Programme Educational Objectives (PEO)

Programme Educational Objectives (PEO) are specific goals describing the expected achievement of graduates in their career and professional life after 5 years of graduation.

Below are the PEO for this programme:

- PEO1:** Practice in-depth and specialist knowledge, technology and skills of Science and Analytics, and related disciplines in solving emerging challenges.
- PEO2:** Demonstrate business acumen in solving complex problems and sustain intellectual curiosity through life-long learning.
- PEO3:** Demonstrate effective leadership and communication to a wide variety of audiences or multi-disciplinary teams, tolerate and value different global perspectives and cultures.
- PEO4:** Practice professional, ethical and societal responsibilities, and show adaptability in different roles and surroundings in contributing to the community.

## Programme Outcomes (PO)

Programme Outcomes (PO) are statements describing what students are expected to know and be able to perform or attain by the time of graduation. These are related to the Knowledge (K), Skills (S), and Attitude (A) that students acquire throughout the programme.

Below is the list of PO for this programme:

- PO1:** Ability to integrate Data Science and Analytics knowledge for effective and excellent practice as a Data Scientist and Data Analyst.
- PO2:** Ability to apply knowledge, technology and skills of Data Science and Analytics to discover potential yet hidden information, knowledge and insights for data-driven and well-informed decision making.
- PO3:** Ability to apply critical and creative thinking and conduct systematic investigations into complex Big Data, analytics and decisions problems to generate innovative solutions and extend knowledge in Data Science and Analytics.
- PO4:** Ability to effectively communicate, orally and in writing, Data Science and Analytics solutions to peers, superiors, clients and experts.
- PO5:** Ability to apply independent and life-long learning skills to keep up with latest relevant knowledge and cutting edge technologies in Data Science and Analytics, and build up further professional and information management skills.
- PO6:** Ability to work and function effectively in community and multidisciplinary teams either as a leader or a group member, demonstrate respect for cultural diversity and contribute to their organization and society.
- PO7:** Ability to prepare, publish and present technical material to a diverse audience applying ethics, values, attitude, professionalism and sustainable practices.
- PO8:** Ability to demonstrate entrepreneurial and management skills.

## Course Details

### **MPSW 5013 Research Methodology:**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Apply ethical research skills in constructing research questions, objectives and hypothesis (if any) relevant to the research problem.
- CLO2: Synthesize relevant literature to address the knowledge gaps.
- CLO3: Develop research proposal with an improvement of existing knowledge.

#### Synopsis:

The primary goal of this course is to provide students with the necessary knowledge and skills in preparing for their Master dissertation. In this course, students will be exposed to the important concepts of conducting scientific research and managing ethical research. The course is designed to introduce students to the principles and good practices of conducting research. Activities at each step of the research process will be elaborated in order to develop the skills and competencies required to facilitate a successful research project at postgraduate level. At the end of the course, students are expected to submit a research proposal relevant to their field of study.

**MPSW 5063 Entrepreneurship****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyse entrepreneurial skills in identifying and exploiting entrepreneurial opportunities.
- CLO2: Apply commercially viable ideas, projects, products prototypes for commercialization within the context of societal framework and to deliver business model canvassing and business value proposition.
- CLO3: Develop creative and viable high tech business models and strategies.

**Synopsis:**

The objectives of this course are to provide students a robust foundation in theories relevant to the improvement of entrepreneurial behaviour and capabilities in the context of technology ventures and to stimulate them to think and behave like an entrepreneur. First, the course covers fundamental issues such as the influence of risk and uncertainty, the role of technology in entrepreneurship, opportunity recognition, business model creation, life cycle and key stages of the entrepreneurial business and the development of an operational and financial foundation of a technology venture. Second, the course provides students with actionable knowledge by familiarising them

with the areas of entrepreneurial expertise necessary in order to found and/or grow a technology venture.

**MTDS 5113 Fundamentals of Data Science****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Explain what Data Science is and analyze the skill sets needed to be a data scientist.
- CLO2: Identify the Data Analytic Life-cycle and how its components interact.
- CLO3: Construct computer program to carry out basic statistical modeling and analysis.

**Synopsis:**

The course provides an introduction to data science, which is the study of the generalizable extraction of knowledge from data. Being a data scientist requires an integrated skill set spanning mathematics, statistics, machine learning, databases and other branches of computer science along with a good understanding of the craft of problem formulation to engineer effective solutions. This course provides an overview of today's Big Data environment, the rationale and opportunity for a new approach to analytics, the roles required, including the Data Scientist, and representative examples of big data analytics in industry. This course introduces students to the fundamental principles of data science that underlie the algorithms, processes, methods, and

data-analytic thinking. It also introduces students to algorithms and tools based on these principles, and frameworks to support problem-focused data-analytics thinking. The course ends by examining students understanding on integration and synthesis of concepts and their application to solving problems.

**MTDS 5123 Big Data Management****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: To distinguish the requirements of traditional data management and big data management.
- CLO2: To compare the characteristics of big data solutions in the market.
- CLO3: To build a big data management application using selected big data solutions.

**Synopsis:**

Big data is the new norm for many organizations. Meaningful insights obtained from this huge amount of collected data help organizations remain competitive. Hence it is important that organizations manage their big data properly. In this course, the many challenges in managing big data such as data quality, data security, data privacy, data storage, data processing and data analytics are exposed. Ecosystem and future trends are elaborated to get better insight in managing big data. This course introduces NoSQL data storage like MongoDB, Cassandra, and Neo4J which stores non-relational data model easily. To deal with the huge amount data that need to be stored and processed, Hadoop which is the de-facto technology for big data management is explored by this course. HDFS which is Hadoop

data storage component and MapReduce which is Hadoop data processing component are delved into. This course also discusses Hadoop ecosystem which provides added functionalities for managing big data such as Flume and Sqoop for data ingestion. For analyzing big data, this course introduces Spark and its ecosystem to provide different types of analytics. At the end of the course, students will have exposure and understanding in managing big data, what tools are appropriate and relevant to manipulate and to integrate in planning and designing comprehensive solution for big data management.

**MTDS 5133 Applied Statistical Methods****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Find solutions for statistical problems using appropriate statistical techniques.
- CLO2: Analyse solutions for real life statistical problems.
- CLO3: Formulate solutions for statistical problems using statistical software.
- CLO4: Integrate solution plan to application problems based on available data.

**Synopsis:**

Applied statistical methods covers the fundamental understanding of statistical methods necessary to deal with a wide variety of practical problems. The course offers a curriculum that provides a balanced approach towards learning of statistical theory and its applications. The core courses give a thorough grounding in advanced statistical methods. Topics covered in this course stresses clarity of understanding, interpretation, and method of application. Various qualitative and quantitative methods in research will be discussed in this course. This includes also on how to compute, evaluate and analyze qualitative and quantitative data. This course also covers the discovery and exploration of complex multivariate relationships among variables. Multi-

variate analysis is a set of statistical techniques used for analysis of data that contain more than one variable. The underlying theory required to understand the multivariate methods, as well as their applications in data analysis will be discussed. Methods in time series analysis also will be discussed where it comprises methods for analyzing time series data to extract meaningful statistics of the data as well as forecasting future values.

**MTDS 5143 Applied Machine Learning****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Explain the concepts and principles of machine learning.
- CLO2: Evaluate different machine learning techniques in terms of their applicability to different Machine Learning problems.
- CLO3: Manipulate appropriate tools to apply suitable machine learning techniques to the data set given to solve the problem.
- CLO4: Formulate a systematic approach to conduct scientific experimental investigations.

**Synopsis:**

Machine learning is a rapidly growing field at the intersection of computer science and statistics, which concerns about finding patterns in real data. The learning evolved from the study of pattern recognition and computational learning theory in artificial intelligence to explore the construction of algorithms for making prediction on data. This course aims to provide practical skills in applying machine learning algorithms on real applications. It emphasizes on the implementation and evaluation of machine learning systems. The main focus will be placed on

applying machine learning model for problem solving more than the fundamental understanding of learning algorithm. Students will be exposed to the tasks on design, implementation, training and evaluation of a machine learning systems. Topics of discussion include: introduction to machine learning; real-world data; feature engineering; classification techniques; predicting continuous target variables; model evaluation, parameter tuning; clustering analysis; association analysis; ensemble learning; reinforcement learning; deep learning; and scaling machine learning workflows.

**MTDS 5153 Big Data Analytics and Visualization****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Identify the concepts, fundamentals and methodologies of big data analytics.
- CLO2: Interpret massive volumes of unstructured data using data analytics software.
- CLO3: Construct big data analytics and visualization strategy in a proper and meaningful way using appropriate techniques.

**Synopsis:**

This course consists of two parts: Big Data Analytics and Data Visualization. In the first part, the course brings together several key information technologies used in manipulating, storing, and analyzing big data especially unstructured data. The unstructured data are text, images, videos, audio/speech. R or Python or other tools will be used as the tool for analysing the unstructured data. In the second part of this course, data visualization is covered to enables multi-level analysis of data. The fundamental concepts in data visualization will be covered, including the various types of data visualization according to input types, different approaches in determining good data visual-

ization techniques and methods, good practices for amplifying cognition, revealing better insights and unveiling underlying structure. Students will also learn how to develop interactive visualizations and applications, use various data exploratory functions and how to present the data.

## **MTDS 5163 Modelling and Decision Making**

### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Interpret knowledge of modelling and prescriptive analytics with data science for data-driven and evidence-based decision making.
- CLO2: Choose appropriate and relevant modelling and prescriptive analytics technique using Big data input to solve complex decision problems.
- CLO3: Propose prescriptive models and solutions using appropriate software tools and analysis of Big data, and communicate the results.

### **Synopsis:**

In Data Science, prescriptive analytics is the final frontier of analytics, which entails the application of mathematical modelling, simulation, optimization and computational intelligence to suggest decision options, taking advantage of the results from the earlier analytic stages of descriptive and predictive analytics. Prescriptive analytics optimizes decision making and able to suggest or prescribe what actions to take in order to maximize

output, given constraints and key objectives, and shows the implication of each decision option. In this course, students are exposed to operations research modelling, and meta-heuristics and soft computing based optimizations, and showed how to exploit them to solve real-world decision problems. The course covers the arts of decision making, decision making and modelling process, decision analysis and method of decision science which involves the application of selected operations research and optimization (hard and soft) techniques, to strategic and managerial decision problems. The focus is to impart analytical systems level thinking and problem solving skills in complex decision making contexts. At the end of the course students will have exposure and deep understanding on how organizational decisions are made in the present of Big data, what appropriate and relevant modelling and analytics solutions should be provided to support well-informed, in-time and effective decision making.

### **MTDS 5213 Special Topics in Applied Data Science**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyze emerging technologies in data science.
- CLO2: Integrate new data science concepts and skills to selected application domains.
- CLO3: Demonstrate data science results to various stakeholders.

#### **Synopsis:**

The course starts by introducing the current computing culture in selected applications domain. Data Science in the selected applications domain are discussed as well as its scenario in Malaysia and globally. Then the course provides a comprehensive examination of data science as it is applied to real organizations and processes within the application domain. Students will be introduced

to real-world examples and have the opportunity to learn from industry case studies on organizations that have successfully applied data science to their advantage. This course will also provide the students with an understanding of the use of emerging technologies in data science. Communicating data science results to various stakeholders is also emphasized in this course.

### **MTDS 5223 Manufacturing Analytics**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Illustrate analytics use cases in manufacturing systems.
- CLO2: Formulate analytics models for manufacturing systems.
- CLO3: Accommodate appropriate tools to implement analytics model for manufacturing use cases.

#### **Synopsis:**

Manufacturing analytics aims to analyse the production data to generate added value. The analytics models are purpose-built to improve decision-making and boost production performance. Manufacturers take advantage of the actionable insights to reduce process flaws, increase performance, save time and cost. This course aims to provide a general overview of implementing analytics in manufacturing domain. It emphasizes on practical issues and application of advanced analytics on manufacturing challenges. The main focus will be placed on designing the manufacturing use

cases using analytics tools toward actionable intelligence. Topics of discussion include: introduction to manufacturing analytics; the return of investments in manufacturing analytics; product design analysis; the manufacturing process; automation and computer-aided manufacturing; IoT-enabled manufacturing system; manufacturing performance management, performances analysis method, and production scheduling system; and the human side of analytics in manufacturing industry.

**MTDS 5233 Social Media Analytics****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyze the fundamentals and concepts of social media data mining.
- CLO2: Prepare appropriate solution steps for social media data analysis based on text mining methods.
- CLO3: Build computer program based on appropriate text mining methods for practical uses in social media analytics.

**Synopsis:**

This course will introduce social media content analytics. Text data mining, especially data from social media has been gaining attention as the available volume of online social media information grows at a rate that is by far higher than our human capacity to handle and process such a huge volume of data from the web. Topics that will be covered in this course includes overview of social media data mining, mining social media data, mining blog pages and other social web analysis.

5. Siddhartha Chatterjee, Michal Krystiynczuk, Python Social Media, 2017.

**MTDS 5243 Geospatial Analytics****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyse geospatial analytics approaches on various geospatial data.
- CLO2: Integrate required knowledge and skills to solve real-world geospatial analytics problems.
- CLO3: Construct multi-step workflows in variety of geospatial analytics applications.

**Synopsis:**

Geospatial analytics offers revolutionary approaches in discovering how and why location matters in problem solving and decision-making. This course elaborates the acquisition, processing, analysis and interpretation of objects, areas and phenomena

by utilising geospatial analysis for various domains, such as environmental sustainability, urban planning, agriculture and natural resources. It aims to provide knowledge and skill in geospatial analysis particularly by making use of remotely sensed data captured from sensors mounted on airborne and space borne platforms. In order to understand an object, area or phenomenon, students will be integrating knowledge and skills in image processing that involves the use of fundamental and advanced algorithms, analysing, visualizing and interpreting of geospatial data for problem solving and decision making.

### MTDS 5253 Healthcare Analytics

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Construct solution in healthcare analytics through simple modelling and simulation.
- CLO2: Evaluate a concept of healthcare analytics to support the data sciences analysis and design.
- CLO3: Formulate the healthcare analytics in solving problems data science problems.

#### Synopsis:

This course covers the transformation of big data by creating enormous opportunities for companies, researchers and other related area in healthcare to improve patient outcomes. Healthcare analytics powers data-driven transformations that combine strategy, big data and advanced analytics, and implementation processes to change the way healthcare companies especially think, decide, and act. The four areas within healthcare are considered as a case study; claims

and cost data (retail purchases e.g. data captured in running stores), pharmaceutical and research and development (R & D) data, clinical data (collected from electronic medical records (EHRs)), and patient behaviour and sentiment data (patient behaviours and preferences). By the end of this course, students are able to design, analyse and implement the healthcare analytics concepts in data sciences.

### **MTDS 5263 Tourism Analytics**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Evaluate each one of the concepts in tourism analytics.
- CLO2: Propose appropriate solution for tourism application problems using analytics software.
- CLO3: Solve tourism application problems using appropriate analytics method.

#### Synopsis:

The course covers the development of analytics in tourism. There are three types of analytics including descriptive, diagnostic and predictive analytics in this course. Moreover, the sentiment analysis for the tourism data will also be implemented. At the end of the course, the student is required to produce a dashboard.

## **MTDS 5273 Customer and Financial Analytics**

### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Analyze analytics use cases in customer behaviour and financial systems.
- CLO2: Propose appropriate solution steps for customer behaviour and financial systems.
- CLO3: Build computer program based on appropriate methods for practical uses in customer and financial analytics.

### **Synopsis:**

Customer analytics is a process by which data from customer behaviour is used to help make key business decisions via market segmentation and predictive analytics. This information is used by businesses for direct marketing, site selection, and customer relationship management. Marketing provides services in order to satisfy customers. With that, the productive system is considered from its beginning at the production level,

to the end of the cycle at the consumer. Customer analytics plays a very important role in the prediction of customer behaviour today. Financial analytics explores how financial statement data and non-financial metrics can be linked to financial performance. In this course, students will learn how data is used to assess what drives financial performance and to forecast future financial scenarios.

### **MTPU 5314 Project 1**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Identify the problems, objectives and scope based on current trends of technologies.
- CLO2: Perform a comprehensive literature review and appropriate procedures to complete the project.
- CLO3: Justify the suitable key answers to clarify the contribution in application domain.

#### **Synopsis:**

This course is the first part of project that contains the results based on the theories and techniques of current technologies learnt previously. Besides writing the proposal, student is required to write four chapters of dissertation i.e. Chapter 1: Introduction, Chapter 2: Literature Review, Chapter 3: Research Methodology and Chapter 4: Analysis & Design. In addition, student must accomplish the project design and justify the proposed solution during presentation.

### **MTPU 5326 Project 2**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Demonstrate the solutions with significance contribution to the application domain.
- CLO2: Verify the proposed solutions to understand the strengths, weaknesses and limitations of the study.
- CLO3: Defend the proposed solution by articulating the series of processes to achieve the end results of the domain business requirements.

### Synopsis:

This course is the second part of project that show the ability of student in applying the theories and techniques of knowledge and technologies learnt previously. Student must write the second fold of dissertation which consists of three chapters of dissertation i.e. Chapter 5: Implementation, Chapter 6: Evaluation and Chapter 7: Conclusion & Future Works. These chapters must align with the proposed solutions developed as the end product of this project. Student is required to justify the contribution of the proposed solutions throughout the presentation and demonstration sessions.

# **MASTER OF SOFTWARE ENGINEERING (MOBILE DEVELOPMENT)**

## MASTER OF SOFTWARE ENGINEERING (MOBILE DEVELOPMENT)

The goal of this programme is to produce expert developers and designers of mobile applications within the ICT practitioner and related disciplines, which can strengthen their role and become the leader that instil innovative and entrepreneurial values on the global stage by applying suitable mobile application development's principles and techniques.

### Programme Educational Objectives (PEO)

Programme Educational Objectives (PEO) are specific goals describing the expected achievement of graduates in their career and professional life after 5 years of graduation.

Below are the PEO for this programme:

- PEO1:** Practice in-depth and specialist knowledge, technology and skills of Mobile Development, and related disciplines to effectively support complex organizational decision making.
- PEO2:** Demonstrate business acumen in solving complex problems and sustain intellectual curiosity through life-long learning.
- PEO3:** Demonstrate effective leadership and communication to a wide variety of audiences or multi-disciplinary teams, tolerate and value different global perspectives and cultures.
- PEO4:** Practice professional, ethical and societal responsibilities, and show adaptability in different roles and surroundings in contributing to the community.

## Programme Outcomes (PO)

Programme Outcomes (PO) are statements describing what students are expected to know and be able to perform or attain by the time of graduation. These are related to the Knowledge (K), Skills (S), and Attitude (A) that students acquire throughout the programme.

Below is the list of PO for this programme:

- PO1:** Integrate software and application development knowledge for effective and excellent practice as a mobile application developer and designer.
- PO2:** Apply knowledge, technology and skills of software and app developer to provide knowledge to design and develop innovative and quality mobile applications.
- PO3:** Apply critical and creative thinking and conduct systematic investigations into complex mobile application development and decisions problems to generate innovative solutions and extend knowledge in software and app development.
- PO4:** Ability to effectively communicate, verbally and in writing, software and application development solutions to peers, superiors, clients and experts and participate in multidisciplinary teams either as a competent leader or a group member.
- PO5:** Ability to apply independent and lifelong learning skills to keep up with latest relevant knowledge and cutting-edge technologies in mobile application development, and build up further professional and information management skills.
- PO6:** Work and function effectively in community and multidisciplinary teams either as a leader or a group member, demonstrate respect for cultural diversity and contribute to their organization and society.
- PO7:** Prepare, publish and present technical materials to a diverse audience, applying ethics, values, attitude and professionalism.
- PO8:** Demonstrate entrepreneurial and management skills.

Programme Structure - Full Time**September Intake:**

<b>Semester 1 (September)</b>		
<b>Course Code</b>	<b>Course</b>	<b>Credit</b>
MPSW 5043	Research Methodology	3
MPSW 5063	Entrepreneurship	3
MSMD 5113	Native Mobile Development I	3
MSMD 5123	Internet of Things Development	3
MSMD XXXX	Elective 1	3
<b>Total credit</b>		<b>15</b>
<b>Semester 2 (February)</b>		
<b>Course Code</b>	<b>Course</b>	<b>Credit</b>
MTPU 5314	Project 1	4
MSMD 5133	User Experience Design & User Interface Practice	3
MSMD 5143	Mobile Analytic	3

## Course Details

### **MPSW 5013 Research Methodology:**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Explain the conceptual understanding of ‘Research’, ‘Research Activities’ and ‘Types of Research’.
- CLO2: Identify the problem area for research and focusing on a specific topic.
- CLO3: Develop a cohesive and robust research proposal on a chosen topic.
- CLO4: Implement/select research methodology techniques and tools within the Research Proposal.
- CLO5: Develop an awareness of important ethical and societal issues and carries out his or her research at the highest ethical standards.

#### Synopsis:

The course is designed to introduce students to the principles and good practices of Research and Development (R & D). Activities at each step of the research process will be elaborated in order to develop the skills and competencies required to facilitate a successful research program at postgraduate level. At the end of the course, students are expected to submit a research proposal on the topic of their interest.

8. Siti Uzairiah Mohd Tobi, Qualitative Research and Nvivo 10 Exploration, Aras Publication, 2014.

**MPSW 5063 Entrepreneurship****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Explain the conceptual understanding of ‘Entrepreneurship’, ‘Marketing’ and ‘Business Plan’.
- CLO2: Identify commercially viable ideas, projects, prototypes products & compelling Intellectual Property (IP) for commercialisation.
- CLO3: Develop a cohesive and robust business plan on a chosen topic.
- CLO4: Identify the constraints and interactions within the technological, business, global and social environments.
- CLO5: Develop an awareness of important ethical and societal issues and carries out his or her business plan at the highest ethical standards.

**Synopsis:**

This course is designed for ambitious new competences, engineers and scientists in creating acquiring and existing business, or working in industries serving the entrepreneurs, or post-grads interested in acquiring and developing their talent as well as familiarising with the concepts, issues, and techniques of new venture creation. It addresses challenging issues on high technology venturing, intellectual property and

intellectual property development, the installation of innovative organisation, the effective control of the innovation, and the management of the supply chain. A key element of the Entrepreneurship program is the development of business plan by teams aiming to create new ventures. Topics include development of successful ideas, developing a profitable business models, writing a business plan, market opportunities for high-tech products enabled by technology, technology and innovation, intellectual property rights, inventions inventors and invention ownership, strategic control for new ventures and venture legal aspects.

3. Mary Coulter, Entrepreneurship in Action, 2nd Edition, Prentice Hall, 2003.
4. Kuratko & Hodgetts, Entrepreneurship, 3rd Edition, Dryden Press, 2004.

**MSMD 5113 Native Mobile Development I****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Demonstrate understanding of the concept and fundamentals of native mobile application and development.
- CLO2: Develop an application using android native language.
- CLO3: Integrate the application with existing API services available on the internet and devices hardware.

**Synopsis:**

This course will offer a comprehensive preliminary to native mobile application development using java. Topics that will be included in this course includes decentralized data storage plus centralizing data via web service call, multi-threaded programming in native as well as incorporating existing API service available on the internet such as Google API and Firebase API. In addition, students are exposed to integrate the application with available hardware available on devices such as sensors and GPS.

3. Bill Phillips, Chris Stewart & Kristin Maricano, 2018 Android Programming, 4th Edition, Big Nerd Ranch Guides, 2018.
4. Mark Wickham, Practical Android, 1st Edition, Apress, 2018.
5. Neil Smyth, Android Studio 3.0 Development Essentials - Android, 8th Edition, CreateSpace Independent Publishing Platform, 2018.

**MSMD 5123 Internet of Things Development****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Discover convergence of technologies and emerging applications of IoT.
- CLO2: Evaluate of IoT products, platforms, and applications.
- CLO3: Design and develop smart IoT applications.

**Synopsis:**

In this course, students will learn to develop Internet of Things (IoT) applications for various purposes on the latest cloud and mobile phone platforms. The Internet of Things allows billions of devices, sensors, cloud infrastructure and business intelligence tools

to come together to enable people to make informed decisions. This helps businesses to drive more innovation and services. Graduates from this course would be in high demand as they would have acquired the right skills to develop smart applications and services to respond to industry's needs. This subject covers the concepts of the Internet of Things (IoT), its conceptual framework and how the IoT contributes to business and daily life. It will also cover the IoT architecture and gives an overview of the core technologies required for supporting IoT. It also provides knowledge on both the underlying technologies which support IoT and M2M communications, and engages the students in the creative development of simulation scenarios for innovative Internet of Things applications.

jerdi, Internet of Things: Principles and Paradigms, Elsevier, 2016.

5. Arshdeep Bahga & Vijay Madisetti, Internet of Things – A hands-on approach, Universities Press, 2015.

### **MSMD 5133 User Experience Design & User Interface Practice**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Analyse successful practices in emerging interface design.
- CLO2: Identify suitable design to ensure a good user experience.
- CLO3: Design effective prototypes and wireframes using an iterative methodology

#### Synopsis:

This course introduces the students to advanced practices and tools of the User Experience (UX) / User Interface (UI) design for mobile applications. It covers history of user experience, information design, elements of user experience, wireframing, mockup, prototype and guidelines in guiding students to build a mobile application through individual and group work. Using current technologies and tools, students will create a basic mobile application by applying mobile interface guidelines. As a whole, the course

will expose students to state-of-the-art, advanced UX/UI tools and techniques and prepare them to design good and realistic interface.

3. ZenZen Studios, 2018 Dot Grid UI and UX Notebook: A Planning Notebook for Developers, Independently published, 2016.
4. Cao J. Zieba & Ellis M., Guide to Wireframing/Prototyping/Mockups, Site-Point, 2016.
5. Scott Faranello, Practical UX Design, Packt Publishing, 2016.

### **MSMD 5143 Mobile Analytic**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Analyze the relationship between mobile testing and mobile analytics.
- CLO2: Discuss the role of mobile analytics in improving software and app quality.

CLO3: Demonstrate the application of mobile analytics tool in a sample mobile app case.

#### Synopsis:

This course introduces the students to analytics incorporated into a mobile app described as in-app analytics. It explains how mobile analytics complement mobile apps testing to help in improving software quality. Using current technologies and tools, students will apply mobile analytics on a sample mobile app to analyze how the app is being used and its performance for the end users. The course will also expose the students to the issues and challenges of mobile analytics as well as how the data collected can be analyzed using data mining for the purpose of descriptive, predictive and prescriptive analysis.

#### References:

3. Julian Harty & Antoine Aymer, The Mobile Analytics Playbook: A practical guide to better testing to Master Data Analytics, 2016.
4. Feras Alhlou, Shiraz Asif & Eric Fettman, Google Analytics Breakthrough: From

Zero to Business Impcat, John Wiley & Son, 2016.

### **MSMD 5153 Mobile Testing**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Demonstrate understanding of the concept and fundamentals of testing and mobile application testing.
- CLO2: Comparing and contrasting testing types to appropriate contexts and scenarios for the audiences of interest as well as their strengths and weaknesses.
- CLO3: Construct the test case, analyze the results, and report the findings effectively.

#### **Synopsis:**

This course gives exposure to the students about the mobile application testing concept and focus on process to develop and implement types of mobile testing such as hardware testing, software or application testing. Topics include how to plan and conduct mobile application testing, and how to report results from the testing. In this course, students will be guided to use mobile application testing tools.

4. Eran Kinsbruner, Continuous Testing for DevOps Professionals: A Practical Guide From Industry Experts, 1st Edition, CreateSpace Independent Publishing Platform, 2018.
5. Boni Garcia, Mastering Software Testing with JUnit 5: Comprehensive guide to develop high quality Java applications, Packt Publishing, 2017.

### **MSMD 5163 Mobile Back-End**

#### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Explain the emerging elements in mobile backend development.
- CLO2: Construct program for backend application.
- CLO3: Propose a high-level system design by using appropriate system architecture.

**Synopsis:**

This course introduces the students to practices and tools of the mobile backend development. It covers creating an API for mobile, server to server connection, cloud technology, mobile app backend services, performance and security. Using current technologies and tools, students will create a basic mobile backend application. As a whole, the course will expose students to state-of-the-art, tools and techniques to develop mobile backend application.

5. Azat Mardan, Practical Node.js: Building Real-World Scalable Web Apps, 2nd Edition, APress, 2018.

**MSMD 5213 Agile Project Management****Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Apply the concept of agile project management for any IT projects.
- CLO2: Work on the principles and practices of agile project management in the IT projects.
- CLO3: Follow the standard guideline to produce a project vision and the product roadmap in a collaborative team environment for the purpose of IT project completion.

**Synopsis:**

This subject introduces the basic concept of agile project management to the student. It covers the agile project management process which includes agile tools and techniques for today knowledge-based projects. A knowledge-based project requires the project manager to manage, optimize and facilitate knowledge as a resource throughout the duration. This subject also covers support areas such as risk management. This subject exposes the student to the transition of a traditional project management into an agile project management.

## **MSMD 5223 Mobile App Architecture**

### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Classify and distinguish the basic platforms and technology trends of handheld devices.
- CLO2: Recognise and differentiate the mobile architecture components and its functionalities.

CLO3: Demonstrate the ability to design mobile application architecture based on requirements gathered.

### **Synopsis:**

This course covers the theoretical and technical knowledge and skills necessary to design the mobile application architecture. The components of the architecture, the platforms and infrastructure are discussed and elaborated. The concepts of client user interface and data transfer are also covered in this subject.

### **References:**

4. Jakob Iversen, Michael Eierman, Mobile App Development for iOS and Android, Edition 2.0, Prospect Press, 2017.
5. Rebecca Roke, Mobitecture: Architecture on the Move, Phaidon Press, 2017.

## **MSMD 5233 Native Mobile Development II**

### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Demonstrate the process of creating iOS apps and programming best practices.
- CLO2: Compare well-written code from poorly-written code.
- CLO3: Explain iOS API features and examine app functionality into properly designed components.

### **Synopsis:**

This course will provide the knowledge of iOS development concepts as well as iOS programming (i.e. Swift) and the Apple toolset through the creation of iOS native applications as reflected in the design of iOS platform (i.e. iPhone, iPad, iTunes), the Model-View-Controller (MVC) paradigm and various high and low-level iOS's frameworks. It also provides basic concepts about designing intuitive and usable interfaces. The course includes live demos and extensive individual lab work.

### **References:**

5. Darryl Bartlett, Swift Programming in easy steps: Develop iOS apps - covers iOS 12 and Swift 5, In Easy Steps Limited, 2019.

## **MSMD 5243 Mobile Security and Privacy**

### **Learning Outcomes:**

At the end of the course, students should be able to:

- CLO1: Discover and understand the concept of security and privacy for mobile application development.
- CLO2: Form a coherent design strategy for usable, friendly security in mobile applications whilst minimising the risk to users.
- CLO3: Develop a safeguarding application of a mobile.

### **Synopsis:**

Mobile phones have had a very significant impact on individuals and businesses over

the past ten years and their influence continues to grow. Their technologies are being incorporated into a variety of other mobile systems. For both the development of new functionality and the emergence of new security threats, these mobile platforms are the center of attention, hence, ensuring and maintaining the mobile security and privacy is importance to the developers. This course provides an understanding of security and privacy requirements before building a secure mobile application. It also provides the knowledge to understand the mobile security and privacy risks of a mobile device and ways to protect it. Further, the subjects provide the skill to the students to be able to design and develop a safeguarding mobile application.

### MTPU 5314 Project 1

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Identify the problems, objectives and scope based on current trends of technologies.
- CLO2: Construct comprehensive literature review and appropriate procedures to complete the project.
- CLO3: Justify the suitable key answers to clarify the contribution in application domain.

#### Synopsis:

This course is the first part of project that contains the results based on the theories and techniques of current technologies learnt previously. Besides writing the proposal, student is required to write four chapters of dissertation i.e. Chapter 1: Introduction, Chapter 2: Literature Review, Chapter 3: Research Methodology and Chapter 4: Analysis & Design. In addition, student must

accomplish the project design and justify the proposed solution during presentation.

3. Cresswell, J.W., Research Design: Qualitative, Quantitative, and Mixed Methods Approaches, 4th Edition, California: SAGE Publications, Incorporated, 2014.

### **MTPU 5326 Project 2**

#### Learning Outcomes:

At the end of the course, students should be able to:

- CLO1: Formulate the solutions with significance contribution to the application domain.
- CLO2: Evaluate the proposed solutions to understand the strengths, weaknesses and limitations of the study.
- CLO3: Defend the proposed solution by articulating the series of processes to achieve the end results of the domain business requirements.

#### Synopsis:

This course is the second part of project that show the ability of student in applying the theories and techniques of knowledge and technologies learnt previously. Student must write the second fold of dissertation which consists of three chapters of dissertation i.e. Chapter 5: Implementation, Chapter 6: Evaluation and Chapter 7: Conclusion & Future Works. These chapters must align with the proposed solutions developed as the end product of this project. Student is required to justify the contribution of the proposed solutions throughout the presentation and demonstration sessions.
